**15 July 2019**

South Africa - Weather

- Late season harvesting and fieldwork will advance swiftly in the coming week
- Net drying will continue in most locations as well
  - o Free State and neighboring areas remain critically dry
  - o Winter wheat is still dormant or semi-dormant and has not yet been significantly impacted by the dryness
  - o However, timely rain will be needed once the crop begins developing aggressively
  - o Western Cape will generally remain too dry to support ideal winter crop conditions in the coming weeks as well
  - o Additional precipitation is needed to completely reverse the moisture deficits

# United States of America - Weather

**U.S. MIDWEST:** Little rain and warm to hot temperatures will cause significant during the next ten days from the west-central and southwestern Corn Belt into central Illinois causing rising levels of stress and declining yield potentials to late-planted soybeans while most crops that were planted near the normal dates may see rising levels of stress as well, but serious declines in yield potentials may not occur for a while longer.

**U.S. DELTA AND SOUTHEAST:** Tropical Storm Barry will make landfall on south-central Louisiana tonight as a strong tropical storm or weak hurricane bringing flooding rain from southeastern Louisiana through south-central and southeastern Mississippi and into east-central Mississippi and nearby Alabama later today into Monday

o Some crop damage will result from flooding while winds from the storm not likely to be strong enough to pose a serious threat to crops.

# South America - Weather

**BRAZIL:** A restricted rainfall pattern will occur most often in Brazil and Paraguay through the next two weeks with regular rounds of light showers in the northeast near the coast and an increase in rain in southern Brazil today into Sunday with another round of rain Thursday into July 20.

**ARGENTINA:** Argentina will continue to see a restricted rainfall pattern most often through the next two weeks and planting of winter wheat and harvesting of summer crops should advance well overall. The drier areas in southwestern Argentina remain in need of greater rain to improve conditions for winter wheat and little to no rain of significance is expected there for at least the next ten days.

## Europe, New Zealand and Australia - Weather

**EUROPE:** Dryness will continue to be an issue in France this week, especially the west and south, and crops stress will be the greatest in these areas. Dryness continues to be an issue in parts of U.K., Germany, Belgium, Netherlands, Czech Republic and south Poland, but opportunities for rain will occur this week and provide some relief at least temporarily.

**AUSTRALIA:** Drought stricken areas in Queensland and northern New South Wales are expected to receive no "significant" precipitation during the next two weeks and wheat, barley and canola production will continue to struggle. Some recent improvements have occurred in coastal areas of Queensland, but drying will return during the next ten days.
