

Weather Report

26 August 2019

South Africa - Weather

- Free State and neighboring areas will continue to dry down in the coming weeks
- Although winter wheat will remain semi-dormant, the warmer biased conditions could bring some of the wheat out of dormancy in the coming weeks
- The environment for growth will be poor in most locations
- Timely rain will be needed later in September to promote more aggressive development
- Dryness will persist for Western Cape during the next two weeks as well
- The region will need to see significant rain later in September to support better winter wheat conditions

United States of America - Weather

U.S. MIDWEST: Much of the Midwest will have favorable soil conditions for crop development as recent rain and expected rain through early next week should keep soil moisture adequate when a period of drier weather occurs from the middle of next week through the first days of September.

U.S. DELTA AND SOUTHEAST: No significant changes have been made to the two-week outlook since Wednesday and daily rounds of showers and thunderstorms will continue during the next ten days in the Delta and the Southeast.

o Enough rain should fall on the drier areas to induce a welcome increase in soil moisture and to improve conditions for crops.

South America - Weather

BRAZIL: A restricted rainfall pattern will continue most often during the next two weeks and greater rain will be needed soon to improve conditions for early planting.

- o Light showers will occur on occasion in southern and northeastern Brazil with little rain expected from Parana into Sao Paulo. Portions of southeastern Minas Gerais will see light rain today with parts of Rio Grande do Sul seeing light rain Sunday.

ARGENTINA: Argentina will continue to see a restricted rainfall pattern most often through the next two weeks and rain is needed in western Argentina to improve conditions for winter wheat. Some showers will occur on occasion with most of those showers occurring outside of western Argentina where a further depletion of soil moisture is expected.

Europe, New Zealand and Australia - Weather

EUROPE: Restricted precipitation will occur throughout most of the Europe this coming week. The drying will promote good conditions for fieldwork, but will continue to raise concern over portions of France, especially locations that have missed recent rainfall, as well as Serbia, Hungary, Romania and Bulgaria.

AUSTRALIA: Drying will continue over east-central Australia for at least the next ten days to two weeks and the dryness will continue through western and central New South Wales. Most locations will remain completely dry through Monday. Northern winter crop production areas have struggled due to dryness. Concern over serious deficits in long term water supply will prevail and greater rainfall will be needed.
