

Weather Report

29 August 2019

South Africa - Weather

- South Africa will remain in a mostly dry mode during the next two weeks
- o Areas near and along the coasts will occasionally receive light rain through the middle of next week
- o Resulting rainfall will generally be too light to counter evaporation
- o Portions of southern and western South Africa could see more frequent rainfall September 5 – 11, though confidence is low
- Free State and neighboring areas will remain critically dry during the next two weeks
- o Winter wheat will remain dormant or semi-dormant in most locations
- o Timely rain will be needed later in September to help reverse the dryness
- Western Cape will remain dry critically dry in the coming weeks as well
- o Significant rain will also be needed in the main winter wheat areas later this month
- Temperatures will be near to below normal in the western half of South Africa through next Wednesday while areas further east warm to near or above average levels

United States of America - Weather

U.S. MIDWEST: Rain will be less frequent and lighter overall during the next two weeks than what has occurred recently and many areas will dry down overall, but soil moisture should be high enough to support the needs of crops in nearly all of the Midwest.

- o Alternating periods of warmer and cooler than usual conditions will occur while some showers of mostly light intensity develop most days during the period.

U.S. DELTA AND SOUTHEAST: Tropical Storm Dorian will continue to be monitored as it moves towards Florida during the next several days while likely becoming a hurricane.

- o Dorian is now expected to be stronger than what was advertised earlier this week and that storm as well as another disturbance in the Gulf of Mexico will have a more significant impact on the Delta and the Southeast.

South America - Weather

BRAZIL: boost in rain is still expected in Parana this weekend into next week where at least temporary increases in soil moisture and conditions for planting will occur in parts of the region. Light showers will occur into Thursday in portions of southern and northeastern Brazil before rain increases Friday in the far south.

ARGENTINA: Argentina will continue to see a restricted rainfall pattern most often through the next two weeks and western Argentina will remain in need of greater rain to improve conditions for winter wheat.

Some showers will occur on occasion with most of those showers occurring outside of western Argentina where a further depletion of soil moisture is expected.

Europe, New Zealand and Australia - Weather

EUROPE: Two areas of precipitation will be significant during the coming week. The first region is from northeast Spain, Italy, Switzerland, south Germany, Austria, Slovenia and Croatia through Slovakia, the Czech Republic and Poland. The second region is southwest and central to northern portions of the U.K. and Scandinavia.

AUSTRALIA: Drying will continue over east-central Australia through interior New South Wales and interior South Australia and a small portion of northwest Victoria for at least the next ten days to two weeks. Northern winter crop production areas have struggled due to dryness. Concern over serious deficits in long term water supply will prevail.
