

Weather Report
24 October 2019

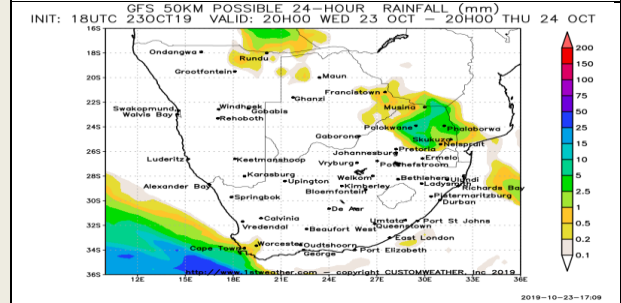

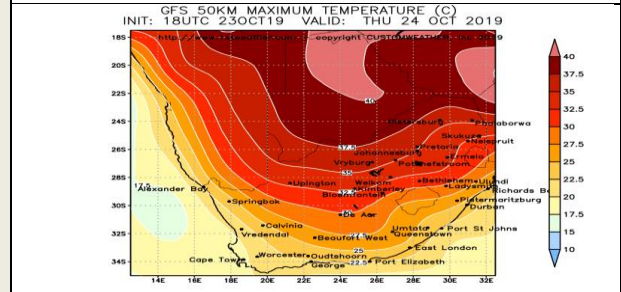

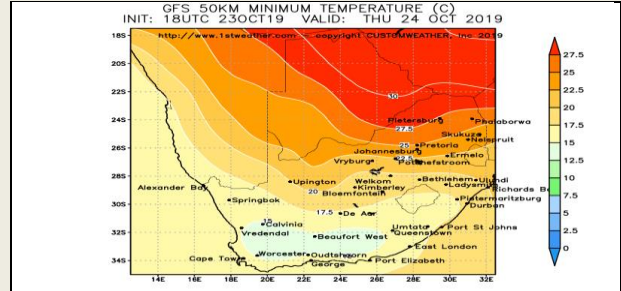

South Africa - Weather

- The main winter wheat areas in Free State, Western Cape, and neighboring locations will remain too dry to support aggressive growth in the coming weeks
- o The rain that does occur will not be enough to significantly bolster soil moisture
- o Development conditions will remain poor until rain potentials significantly increase
- Rainfall through the middle of next week will also be unable to significantly improve the moisture profile for eastern and central South Africa's main summer coarse grain, oilseed, and cotton areas
- o The boost in rain during the second week could otherwise begin improving soil moisture in several areas
- o The periods of rain in the coming days will help alleviate some of the dryness, though most areas will not receive enough rain to fix the moisture deficits

United States of America - Weather

U.S. MIDWEST: The Midwest will continue to see a mostly restricted precipitation pattern and improving to favorable conditions for crop maturation and fieldwork through the next two weeks and good harvest progress should be made around the occasional rounds of precipitation expected.
U.S. DELTA AND SOUTHEAST: Rain has been increased since Tuesday's forecast for the Delta than what was advertised Monday and the region will see rain Thursday night into Friday before a restricted rainfall pattern resumes this weekend and continues into the first week of November allowing harvesting to accelerate.

South America - Weather

BRAZIL: Many of the driest areas from Mato Grosso to Bahia and Minas Gerais to Sao Paulo will benefit regular rounds of showers and thunderstorms during the next week while much of central Paraguay into much of Mato Grosso do Sul and surrounding areas see little rain of significance.

ARGENTINA: Rain will increase Thursday into Tuesday and nearly all of Argentina will receive at least some rain with temporary improvements in conditions for winter wheat and planting of summer crops in the drier areas while the remainder of the country should receive enough rain to keep soil conditions favorable.

Europe, New Zealand and Australia - Weather

EUROPE: Some flooding will linger in south France and northwest Italy today into Thursday as persistent and sometimes heavy rain occurs. Late season rice may be harmed, but the harvest has advanced quite well up to this point.

AUSTRALIA: Restricted precipitation will occur over east-central Australia including Queensland into northern New South Wales the next ten days to two weeks. Dryness concerns will prevail and a soaking of rain is needed to support sorghum, cotton and other crops in the region.
