

Weather Report

13 November 2019

South Africa - Weather

• Late season winter wheat development will not improve significantly due to the periods of rain in the coming days for much of Western Cape o A large portion of the crop that is still standing is otherwise maturing or ready for harvest o Dryness earlier in the growing season has already reduced crop quality in a few locations, though yields should be near normal • Free State's winter wheat areas do not need precipitation o Crops are generally maturing or ready for harvest o Eastern Free State will likely receive enough rain in the coming days to slow or delay maturation and harvesting o Minor quality reductions also possible in the wettest areas • Yields will still be near normal o Western Free State harvesting will advance under more favorable conditions • Eastern South Africa will receive enough rain to gradually bolster soil moisture during the next two weeks o Planting and establishment conditions will improve in most areas o Planting is already behind normal due to the lack of rain in October and most producers will likely get a significant amount of crop in the ground in the coming days o Overall, summer coarse grain, oilseed, and cotton establishment and growth conditions will be favorable or improve

United States of America - Weather

U.S. MIDWEST: The Midwest should see good harvest progress overall during the next two weeks as precipitation will be infrequent and mostly light.
 o A few rounds of mostly light rain or snow will occur through next Tuesday with the precipitation not likely great enough to have much of an impact on fieldwork.

U.S. DELTA AND SOUTHEAST: The Delta and the Southeast will see good harvest progress overall through the next two weeks with some temporary interruptions from rain.

South America - Weather

BRAZIL: Daily rounds of showers and thunderstorms through Friday will bring enough rain to induce further improvements in soil moisture from Paraguay into western, central, and southern Brazil before the weather pattern shifts this weekend into next week and much of that region becomes drier with the driest areas in north-central and northeastern Brazil seeing an increase in rain.

ARGENTINA: Showers and thunderstorms will develop most days during the next week bringing enough rain to at least temporarily improve conditions for planting and crop development in some areas while other areas will be left in need of greater rain.

Europe, New Zealand and Australia - Weather

EUROPE: Further improvements in moisture will continue to occur over Western Europe from northern Spain and parts of France into the U.K. as well as the Italian Peninsula into Austria and eastern Adriatic Sea Nations and Greece. The moisture will be greatest and most beneficial in portions of the Italian and westernmost Balkan Peninsula where dryness concerns have prevailed most of the fall although flooding may evolve from the heavy rainfall. Drying will prevail over interior Balkan Nations into east Romania and Bulgaria.

AUSTRALIA: Mostly dry weather will occur over Australia during the coming week to nine days. Fieldwork will progress favorably following the rainfall early this month and crop establishment should improve. However, significant follow up moisture will still be needed to continue to support cotton, corn, sorghum and other summer crops.
