

Weather Report
05 November 2019

South Africa - Weather

- Portions of Western Cape will be too dry to support ideal late season winter wheat growth o Maturation and harvesting will continue with few disruptions in the coming weeks o Minor quality reductions possible this year due to dryness over the growing season
- Free State's winter wheat areas do not have a pressing need for moisture o Crops are generally maturing or ready for harvest, though some of the later planted crops may still be growing o Maturation and harvesting will likely be sluggish in the eastern half of the region during the next two weeks o Minor quality reductions possible in the wettest areas o Western Free State harvesting will advance with few disruptions
- The moisture profile will slowly improve for the eastern half of South Africa during the next two weeks o Planting and establishment conditions for summer crops will gradually improve o However, many areas will not receive enough rain to completely fix the moisture deficits o Timely rain will still be needed later in November to maintain good summer coarse grain, oilseed, and cotton prospects o Northern Cape and western sections of Free State and North West will need to see better rainfall later this month to support better planting and establishment

United States of America - Weather

U.S. MIDWEST: The two-week outlook for the Midwest has not changed much since late last week and steadily improving conditions for crop maturation and harvesting will occur as precipitation will be infrequent and mostly light.

o Conditions for fieldwork will be slow to improve in the wettest areas as colder than normal temperatures will remain in place most often and drying rates will be slowed.

U.S. DELTA AND SOUTHEAST: The Delta and the Southeast are still expected to see a mostly restricted precipitation pattern during the next two weeks and conditions for crop maturation and harvesting will continue to improve.

o Dry weather will be most common with a few light showers on occasion and the only round of organized precipitation during the next week will occur Wednesday night into Friday.

South America - Weather

BRAZIL: One more day of restricted rain will occur in the driest areas of Paraguay and western Brazil before light showers increase Tuesday and more significant shower and thunderstorm activity begins Wednesday. Enough rain is expected Wednesday through Tuesday of next week to induce notable increases in soil moisture from Paraguay through Mato Grosso do Sul, Goias, and Mato Grosso and conditions for planting of summer crops and crop development should become favorable.

ARGENTINA: One more day of restricted rain will occur in the driest areas of Paraguay and western Brazil before light showers increase Tuesday and more significant shower and thunderstorm activity begins Wednesday.

o Enough rain is expected Wednesday through Tuesday of next week to induce notable increases in soil moisture from Paraguay through Mato Grosso do Sul, Goias, and Mato Grosso and conditions for planting of summer crops and crop development should become favorable.

Europe, New Zealand and Australia - Weather

EUROPE: Some improving moisture conditions in recent weeks has already begun to induce good wheat, barley and rapeseed stands, but additional moisture during the next couple of weeks should only continue to improve conditions. Increased moisture will continue over western Europe the next couple of weeks. Frequent rounds of precipitation will continue over northern portions of the Iberian Peninsula, France and the U.K. into Italy, western Germany into south Scandinavia this week.

AUSTRALIA: Mostly dry weather will return to east Australia this coming week providing favorable conditions for fieldwork and planting after the recent rain.

o The only exception in east-central Australia will be a few lingering showers in eastern Queensland and northeast New South Wales early this week.

☒ Moisture totals will vary from a trace up to 0.40 inch and local totals up to 0.85 inch.
