

Weather Report
05 December 2019

South Africa - Weather

Harvesting of winter wheat will be sluggish at times in Free State and neighboring areas due to rainfall
 o Quality reductions will be a concern in the wettest areas

- The rain will help bolster soil moisture across eastern and central South Africa through the middle of next week
- o Topsoil moisture will become adequate to abundant in most areas, though a few locations will likely need additional rain to completely reverse the moisture deficits
- o Planting is behind for a large portion of the country due to dryness so far this season
- o A minor reduction in planted corn is expected compared to last year due to the late onset of rainfall
- o Overall, the rain will support aggressive coarse grain, oilseed, and cotton establishment and growth in the coming weeks
- o Late season planting may be slowed or delayed during periods of heavy rain
- o Northern Cape into western sections of Free State and North West will see minor improvements to the crop and soil conditions as well
- However, additional rain will be warranted

United States of America - Weather

U.S. MIDWEST: A restricted precipitation pattern will be in place through most of the next two weeks and late harvesting should slowly advance in most areas with the poorest conditions for fieldwork in portions of the northern Midwest snow cover is in place.
 o Temperatures should remain cold enough that the snow melts gradually and when it does melt, fields will be slow to firm up.
 o Some fields may be harvested during periods when the ground is frozen and with a significant surge of cold air expected next week harvesting should accelerate on frozen ground.

U.S. DELTA AND SOUTHEAST: The Delta and the Southeast will see a mix of rain and sunshine during the next two weeks that should allow for late harvesting to advance at a slowed pace around the occasional rounds of rain expected.
 o The next round of rain will occur Thursday into Friday when much of the Delta through Alabama and parts of Georgia sees up to 0.55" of rain and locally more.

South America - Weather

BRAZIL: Daily rounds of showers and thunderstorms through the next two weeks are still expected to bring enough rain to favorably support the needs of most crops in Brazil and Paraguay with exceptions in central and eastern Bahia - where little rain is anticipated - while a close watch will be made and on Rio Grande do Sul where little rain is expected through at least the next ten days.

ARGENTINA: Argentina will continue to see restricted rainfall through the next two weeks allowing for good planting progress while many areas will become short of soil moisture and see rising levels of crop stress.

o More sunshine than rain is expected and most of the showers and thunderstorms that occasionally develop should not bring enough rain to induce more than temporary increases in soil moisture.

Europe, New Zealand and Australia - Weather

EUROPE: Soil temperatures are now cool enough to shut down crop development in many areas in central and Eastern Europe. Crop development is still under way in France, Spain, Portugal, parts of Italy, Greece and the southern Balkan Countries. Portions of the U.K. are still warm enough for some crop development. Autumn fieldwork should be about done, some progress continues in the Iberian Peninsula and southern Italy as well as Greece.

AUSTRALIA: A few showers occurred Monday from Victoria into eastern most New South Wales. Most of the precipitation fell in the Great Dividing Range leaving crop areas mostly unaffected, but one or two locations reported up to 0.30 inch of moisture. High temperatures Monday were in the 50s and 60s in the far southeast and in the 70s from South Australia into New South Wales. High temperatures elsewhere were in the 80s and 90s with extremes over 100 in northern parts of Western Australia and in a few eastern Queensland locations. Low temperatures this morning were in the 40s and 50s south and in the 50s and 60s north.
