

Weather Report
13 January 2020

South Africa - Weather

Eastern and central South Africa will continue to see several waves of erratic rain during the next two weeks. Eastern South Africa will receive enough rain in coming weeks to gradually bolster soil moisture.

- o Crop development conditions will be favorable for Natal and Mpumalanga
- o Limpopo will still struggle with dryness at times, most notably during the next few days
- o Crop development will initially be sluggish until the moisture profile improves
- o However, the coarse grains and oilseeds produced in the region will be in generally good shape
- o Central South Africa will see varying crop conditions in the coming weeks
- o Several areas in Northern Cape and western Free State will be too dry to support ideal development

United States of America - Weather

U.S. MIDWEST: A powerful storm system will bring bringing heavy rain and some flooding to areas from central Missouri to a large part of the eastern Corn Belt today into Saturday with a wintry mix of precipitation expected from eastern Kansas and eastern Nebraska to Wisconsin and Michigan. A close monitoring will be made on the next two storm systems advertised to impact the Midwest as another round of moderate to heavy rain in the lower and eastern Midwest could cause a quick increase in flooding and some serious flooding may result along some of the larger rivers.

U.S. DELTA AND SOUTHEAST: A strong storm system will bring moderate to heavy rain and some flooding to areas from the Delta through Alabama and into northern Georgia today into Saturday. Wet weather will continue Sunday through into Saturday, Jan. 18 and although rain is not likely to be as heavy as what occurs the next two days, enough rain should fall to prolong flooding and worsen flood conditions in some areas.

South America - Weather

BRAZIL: Beneficial rain fell on central Rio Grande do Sul Thursday while light rain fell on a few nearby areas with most of the other significant rain of the day in northern Brazil. Rio Grande do Sul will see regular rounds of showers through Monday with another round of timely rain Wednesday into Thursday of next week and as long as rain falls as advertised crop stress will be eased and crops will have more time before serious stresses were to evolve if follow-up rain does not occur soon. Meanwhile, most of the remainder of Brazil and Paraguay will see regular rounds of showers and thunderstorms through the next two weeks that should bring enough rain to favorably support crop development.

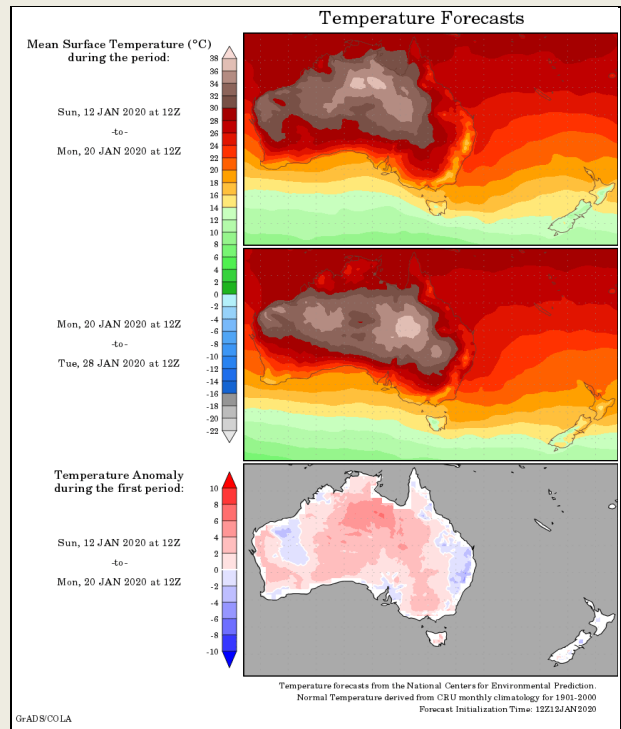

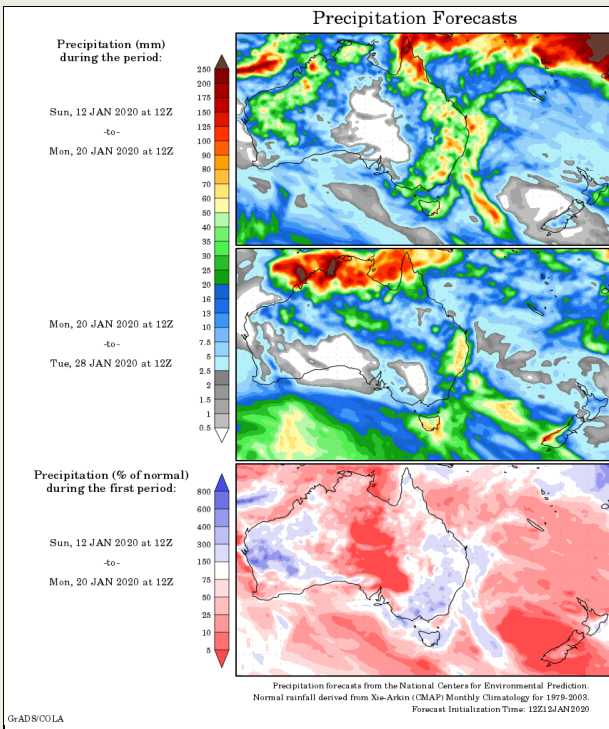

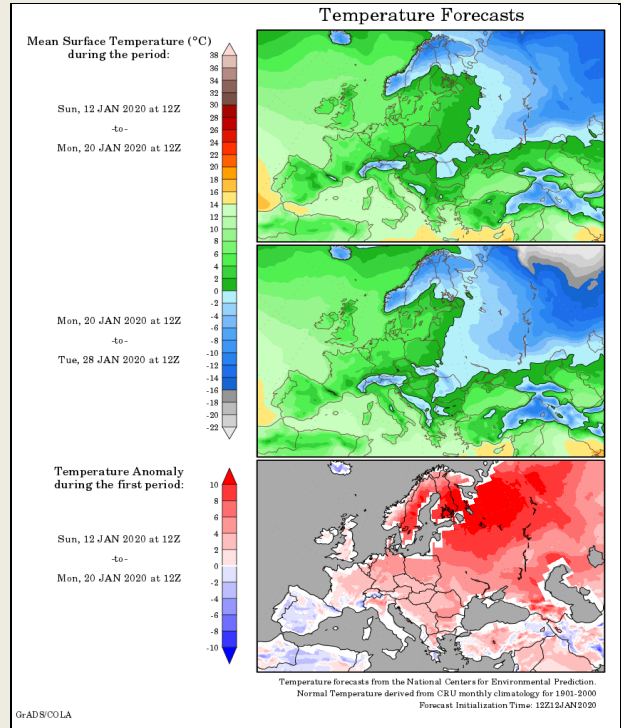

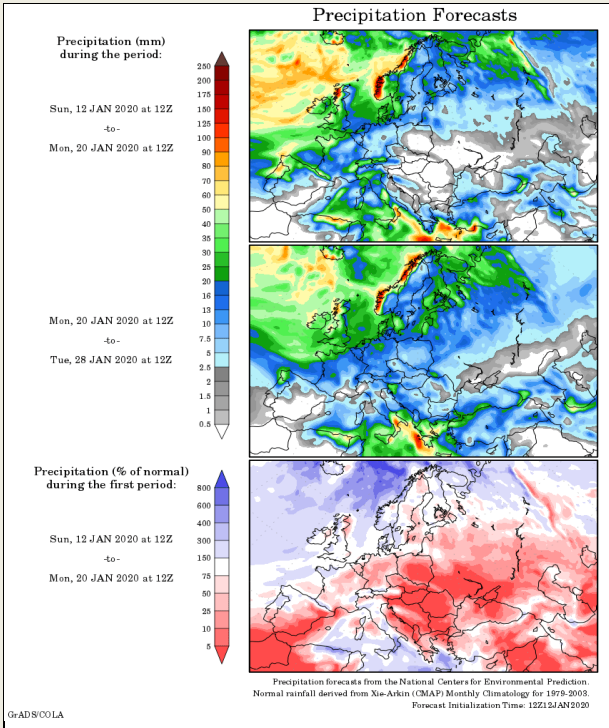

ARGENTINA: Another round of beneficial rain occurred in portions of central Argentina Thursday while a part of west-central Santiago del Estero also received rain with hot and dry conditions elsewhere in the north. An increase in rain is still expected in southern Argentina Sunday into Wednesday and as long as rain falls as advertised nearly all of the country will see favorable conditions for crops through the next two weeks. Rain Sunday into Wednesday will be very important in southern Argentina where subsoil moisture is still low enough that crop stress would quickly increase if that rain event were to falter

Europe, New Zealand and Australia - Weather

EUROPE: Drier than usual conditions are expected to impact Europe the next couple of weeks. The only exception will be northern Europe, specifically the U.K. and Scandinavia, where frequent rounds of precipitation will maintain wetter conditions. AUSTRALIA: Tropical Systems will impact north Western Australia into the desert region of Western Australia benefiting livestock areas of northern Western Australia. The heavy rainfall will not have much impact if any on Australia's bottom line. Some experimental cotton and other crops are grown in the region, but the impact on those crops should be low.
