

Weather Report

01 September 2020

South Africa - Weather

Winter wheat development conditions will remain favorable for Western Cape during the next two weeks due to the ample moisture and additional rainfall
 The small amount of rain-fed winter wheat in Free State and neighboring areas will be too dry to support aggressive growth in the next two weeks despite periods of light rain
 Irrigated crops will develop under more favorable conditions in Free State, Northern Cape, and neighboring areas, though most locations would still welcome a good shot of rain

United States of America - Weather

U.S. MIDWEST: Showers and thunderstorms will bring rain to most areas from the southwestern to the eastern Corn Belt today into Wednesday and soybean yields should increase in the driest areas from eastern Iowa into northern Illinois with the remainder of the lower and eastern Midwest also seeing benefit from the moisture. Rain may increase Sep. 12-14 with the moisture likely coming too late to induce much improvement in crop yields.

U.S. DELTA AND SOUTHEAST: Showers and thunderstorms will bring rain to much of the Delta and the Southeast today through Wednesday causing delays to fieldwork as well as raising concerns over rice and some cotton quality before a drier weather pattern begins Thursday and continues through Sep. 14 allowing fieldwork to accelerate and conditions for crop maturation to improve.

South America - Weather

BRAZIL: A restricted rainfall pattern will continue in much of Brazil and Paraguay through the next two weeks and fieldwork should advance well with some exceptions in far southern Brazil where regular rounds of showers will occur.

o Some concerns over wet weather diseases in winter wheat may increase, but there should be adequate breaks between rounds of rain to prevent serious impacts to the crop from the wet weather.

ARGENTINA: Showers and thunderstorms will continue through Wednesday bringing beneficial rain to much of the country outside of some western and southern areas with some heavy rain in the east while rain in the west is mostly light.

o Some of the driest areas in western Argentina will receive enough rain to temporarily improve conditions for winter wheat while greater rain will fall in most central and eastern areas where soil moisture should be increased enough to induce a longer-lasting improvement in winter wheat conditions as well as improvements in soil moisture for the coming summer crop planting season.

Europe, New Zealand and Australia - Weather

EUROPE: Additional rounds of precipitation will occur from northern Italy and southern Germany into Slovakia and Poland this week. Rounds of rain will also impact the Netherlands and southern Scandinavia into the Baltic Sea Region. The moisture will bolster topsoil moisture.

o Moisture totals will vary from 0.75 to 2.00 inches and locally greater amounts by this time next week.

AUSTRALIA: A restricted precipitation pattern will continue over Australia during the coming ten days to two weeks. Rain is needed in Queensland immediately to support reproduction that is expected to begin in early September, but no such rain will occur for at least the next week to ten days.
