

Weather Report

10 September 2020

South Africa - Weather

Western Cape will still have plenty of moisture to maintain aggressive winter wheat growth during the next two weeks despite the drying trend
 o Yields are expected to be good this year due to timely rain over the growing season
 o The small amount of rain-fed winter wheat in Free State and neighboring areas will be too dry to support aggressive growth in the next two weeks
 o Irrigated crops will develop under more favorable conditions in Free State, Northern Cape, and neighboring areas

United States of America - Weather

U.S. MIDWEST: Showers and thunderstorms will continue through Saturday bringing rain to nearly all of the Midwest at one time or another including additional rain in the driest areas from eastern Nebraska into Iowa where further improvements in drought conditions will occur before a drier weather pattern occurs Sunday through Sep. 23 allowing crop maturation and harvesting to accelerate.

U.S. DELTA AND SOUTHEAST: The Delta will see favorable conditions for crop maturation and harvesting most often through the next two weeks as dry conditions will be most common while the Southeast sees daily rounds of showers through next Wednesday and fieldwork will be slowed before rain becomes less frequent Sep. 17-23.

Outside of a few light and mostly insignificant showers, the Delta will be mostly dry through Friday before isolated to scattered and mostly light showers occur Saturday through Tuesday and cause minor interruptions to fieldwork with the southern Delta seeing most of the rain.

South America - Weather

BRAZIL: Daily rounds of showers and thunderstorms will occur in Rio Grande do Sul through Wednesday of next week with some rain extending into Santa Catarina and southern Paraguay on occasion and concerns over winter wheat quality declines may evolve over time. Meanwhile, outside of some showers in eastern Bahia, the remainder of Brazil will see little to no rain of significance through next Wednesday before scattered showers develop most days from central and northern Paraguay to Parana and portions of Sao Paulo Sep. 17-20.

ARGENTINA: Outside of north-central and northeastern Argentina, much of the country will see little to no rain of significance through the next two weeks and greater rain will be needed in many areas to induce improvements in soil moisture for summer crop planting as well as for winter wheat development.

o Light showers will occur today into Thursday in central and southern Buenos Aires where rainfall totals will be up to 0.50" and locally more.

Europe, New Zealand and Australia - Weather

EUROPE: Rounds of precipitation will occur from the northern U.K. and the North Sea Region through the Netherlands, northern Germany, southern Scandinavia into the Baltic Sea Region and northern Poland this week.

o Precipitation will linger over the Alps Region the remainder of this week as well.

AUSTRALIA: Restricted precipitation will prevail over Australia's winter crop regions during the next ten days. Rain is needed in Queensland immediately to support reproduction that should be starting, but any rain will be confined to southeastern portions of the state and will be erratic and light.

o Conditions will not be completely dry, but rain that does occur will be light and erratic most often and have little change to soil moisture.

o Rain in northeastern New South Wales and southeastern Queensland will be greatest Wednesday into Thursday this week.
