

Weather Report

15 September 2020

South Africa - Weather

Late season winter wheat development will continue under generally favorable conditions for Western Cape during the next few days
 o Development may become sluggish later in the forecast period as the ground continues to firm
 o Yields are expected to be good this year due to timely rain over the growing season
 o The small amount of rain-fed winter wheat in Free State and neighboring areas will be too dry to support aggressive growth in the next two weeks
 o Irrigated crops will develop under more favorable conditions in Free State, Northern Cape, and neighboring areas

United States of America - Weather

U.S. MIDWEST: The Midwest will see a quiet weather pattern and dry conditions most often through the next two weeks allowing for crop maturation and early harvesting to occur in a favorable environment in much of the region.

U.S. DELTA AND SOUTHEAST: Tropical Storm Sally should make landfall on southeastern Louisiana as a weak hurricane Tuesday before turning to the north and then northeast bringing heavy rain and flooding that will likely damage some crops, especially cotton, from southeastern Mississippi, the western and central Florida Panhandle, and southern to central Alabama to west-central and northern Georgia. After Tropical Storm Sally moves out of the southeastern states the region will see a drier weather pattern and most days will be dry from this weekend through Sep. 28 allowing for quick improvements conditions for crop maturation and harvesting in many areas while locations that see heavy rain and flooding from Sally will see slower improvements in conditions for fieldwork. The Delta will mostly miss out on impacts from Tropical Storm Sally and will see favorable conditions for crop maturation and harvesting most often through the next two weeks.

South America - Weather

BRAZIL: A restricted rainfall pattern will be in place most often through the next two weeks and fieldwork should advance well overall with some rain in the far south causing interruptions at times while a beneficial increase in rain may occur in parts of Mato Grosso Sep. 21.

ARGENTINA: Outside of north-central and northeastern Argentina, much of the country will see little to no rain of significance through the next ten days to two weeks and many areas will be left in need of significant rain to induce improvements in soil moisture for summer crop planting as well as for winter wheat development.

- o Southeastern Chaco into northern and eastern Corrientes will see rain Tuesday into Wednesday with rainfall totals varying from 0.50-1.50" and locally more and Corrientes wettest.

Europe, New Zealand and Australia - Weather

EUROPE: Dry and warm weather will occur over a large portion of Europe through Tuesday. France, parts of Germany into the southeastern Balkan Nations will be too dry and a return of greater rainfall is needed to bolster soil moisture. Rain showers and thunderstorms will increase over portions of France, the U.K. into Germany and Italy Wednesday into the second week of the outlook, but confidence in the moisture is low and rainfall that does occur will be erratic and pockets of drying will prevail.

AUSTRALIA: Rain will increase over south-central to eastern Australia later this week.

o Rain will increase over South Australia Wednesday into Thursday. Rain will increase over New South Wales and Queensland Friday through Sunday and the beneficial rain will help bolster soil moisture conditions for reproduction of winter grains. Welcome rain will also increase over southeastern portions of the nation Wednesday into Thursday and Friday into Sunday.
