

Weather Report

17 September 2020

South Africa - Weather

- Late season winter wheat development will continue under generally favorable conditions for Western Cape during the next few days
- o However, development may become sluggish later in the forecast period as the ground firms
- o The environment will otherwise be favorable for maturation
- o Yields are expected to be good this year due to timely rain over the growing season
- o The small amount of rain-fed winter wheat in Free State and neighboring areas will be too dry to support favorable conditions during the next two weeks
- o Irrigated crops will develop under more favorable conditions in Free State, Northern Cape, and neighboring areas
- o Maturation conditions will be mostly favorable

United States of America - Weather

U.S. MIDWEST: The two-week outlook remains highly favorable for crop maturation and harvesting as dry weather will continue to be most common and when rain does fall it will be mostly light causing only brief interruptions to fieldwork. The lower Midwest will be driest and rapid harvesting should occur once crops dry down enough to be harvested.

U.S. DELTA AND SOUTHEAST: After Hurricane Sally moves out of the southeastern states, the region will see a drier weather pattern and most days will be dry this weekend through Sep. 30 allowing for quick improvements in crop maturation and harvesting in many areas while locations that see heavy rain and flooding from Sally will see slower improvements and fieldwork will be slower in resuming. The Delta will mostly miss out on impacts from Hurricane Sally and will see dry and favorable conditions for crop maturation and harvesting most often through the next two weeks.

South America - Weather

BRAZIL: A restricted rainfall pattern will continue through Friday with some rain in the far south before a beneficial increase in showers and thunderstorms begins this weekend from Mato Grosso do Sul and Paraguay to Sao Paulo with parts of Mato Grosso and Goias seeing some beneficial rain next week.

ARGENTINA: Much of Argentina will see little to no rain for another week and many areas will be left in need of rain to improve conditions for winter wheat development and summer crop planting. Portions of northern Corrientes will receive light rain today.

- Today's forecast is wetter for Sep. 23-25 and a large part of northern and some central Argentina locations will receive rain, but outside of the northeast, most of the rain will be light and quickly lost to evaporation without follow-up rain.

Europe, New Zealand and Australia - Weather

EUROPE: Dry and warm weather will occur over a large portion of Europe through Friday. Mainland Europe into southern England will continue to dry down. Conditions will not be completely dry, but rain that occurs will be brief and erratic most often.

AUSTRALIA: Rain will increase over South Australia Thursday into Friday and into New South Wales Saturday into Sunday. A few showers will increase in southern South Australia Wednesday and will linger over east-central Australia into early next week. Rain totals will range from 0.50 to 2.00 inches and local totals in excess of 2.00 inches in South Australia and New South Wales. Rainfall will also reach into southern Queensland helping bolster soil moisture conditions and provide timely moisture for crop reproduction which usually starts in early September. With that said, the greatest moisture is expected to occur in southwestern Queensland Friday into Saturday. Rain will increase in southeastern Queensland late this weekend into early next week, but a greater widespread soaking of rain will still be needed to end dryness concerns.
