23 October 2020

South Africa - Weather

Late-season winter wheat development will remain mostly favorable for Western Cape and the rain-fed areas in Free State, North West, and neighboring locations. Much of the crop is filling and reproducing and there is generally enough moisture to support favorable conditions. Maturation and early season harvesting will also advance swiftly during the next two weeks due to a lack of rain.

The main summer crop areas in eastern and central South Africa will see a mix of erratic rainfall and sunshine during the next two weeks. The rain may help support favorable early season planting prospects in portions of Natal, eastern Free State, and western Mpumalanga, though rainfall will generally be too light to significantly bolster soil moisture. A boost in rain will be needed for most locations later in November to support more aggressive establishment and growth.

United States of America - Weather

U.S. MIDWEST: Daily rounds of showers and thunderstorms along with some snow will occur through Tuesday slowing fieldwork across the Midwest with some harvesting likely to advance between rounds of showers before drier weather returns and harvesting accelerates Wednesday through Nov. 5. Drier weather has returned to the forecast for Oct. 29-30 and a much of Midwest is now expected to be dry.

DELTA AND SOUTHEAST: The Delta and the Southeast will see good harvest progress overall through the next two weeks, but occasional rounds of showers will slow harvesting across the region.
 o Light rain will fall from northern Florida into southern Georgia today with Thursday mostly dry.
 o Rain will increase in the Delta and the Southeast Friday into Saturday and much of the region will receive at least some rain with the Carolinas and southern Virginia missing most of the rain.

South America - Weather

BRAZIL: Northern Brazil will see regular rounds of showers and thunderstorms through the next two weeks and planting of summer crops should advance well as much of the region will see favorable soil conditions. Today's forecast is drier overall for Paraguay and southern into portions of central Brazil where only one round of organized rain is expected during the next ten days to two weeks and that rain event will be important in keeping soil moisture favorable for summer crops.

ARGENTINA: Rain will continue through this weekend and nearly all of Argentina should be left with favorable soil moisture for summer crops and winter wheat with an increase in planting likely as fields dry down next week when rain becomes less frequent Monday through Nov. 5.

Europe, New Zealand and Australia - Weather

EUROPE: Rounds of precipitation will continue to expand over Western Europe this week. Most of the rain will be light and scattered through Friday. Although some greater totals will occur from southeastern U.K. into southern Scandinavia today as well as central to southeastern France Thursday into Friday. Organized and widespread precipitation will return to the U.K., France and northern Spain Saturday into Sunday and shift into Switzerland, southwestern Austria, Italy, Slovenia and the eastern Adriatic Sea Nations early next week.

AUSTRALIA: Much needed rainfall is expected to increase over Queensland and New South Wales Friday into early next week. Widespread showers and thunderstorms will occur on a near daily basis Friday into Tuesday and nearly all locations in southeastern Queensland and northeastern New South Wales will receive "significant" rain to bolster topsoil moisture and improve spring and summer crop planting, emergence and establishment. Western Australia is still too dry and most locations will experience no significant changes during the coming ten days to two weeks. The only exception will be increased showers and thunderstorms over southern portions of the state's production areas, especially near the coast this week.
