

Weather Report

27 October 2020

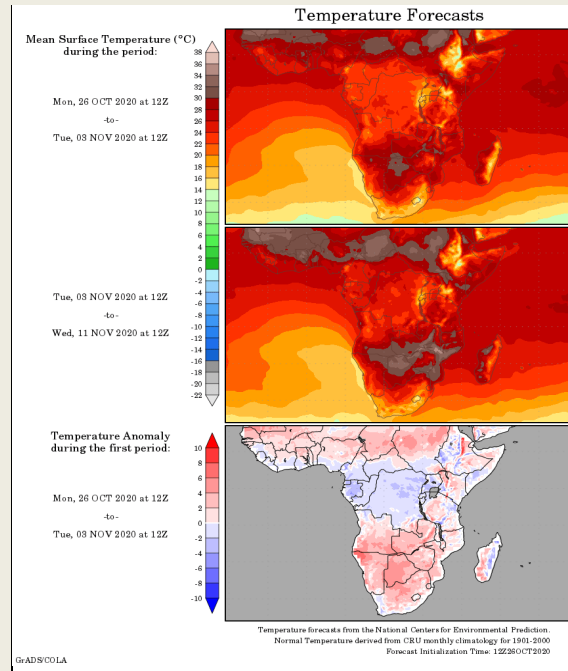

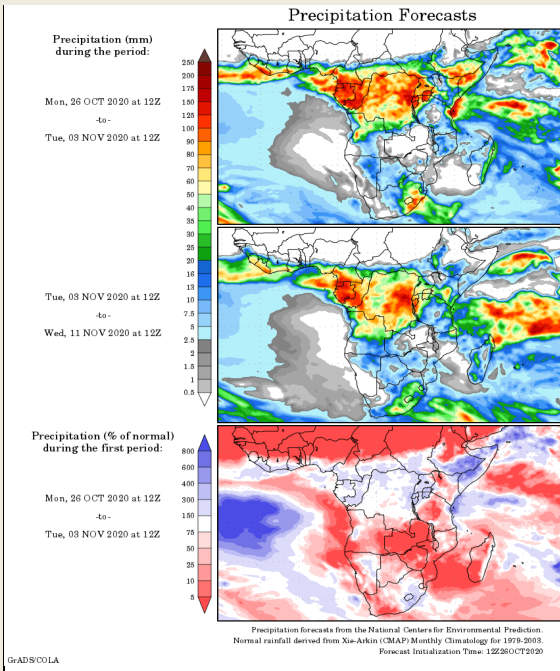

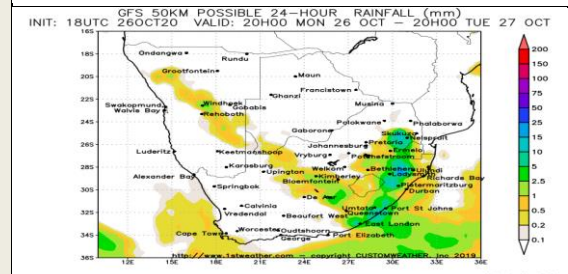

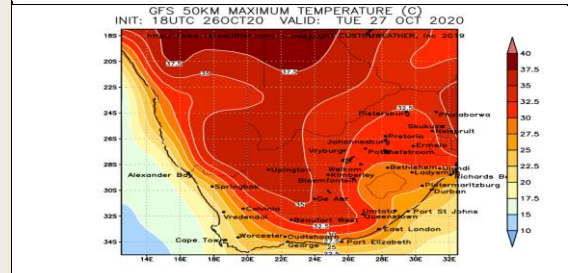

South Africa - Weather

Western Cape and Northern Cape will see a favorable environment for winter wheat maturation and harvesting this week. There is also enough moisture in the subsoil to maintain good conditions for the crops that are still filling and reproducing. Free State will have a few opportunities for rain this week that may slow the winter wheat harvest at times. No significant crop quality impacts are expected.

The main summer crop areas will see several waves of rain this week. The precipitation will help bolster soil moisture and support better early season germination and establishment. Planting may advance slowly during the wettest periods.

United States of America - Weather

U.S. MIDWEST: The lower Midwest will see frequent precipitation through Thursday while most of the west-central and northern Midwest is dry before a period of restricted precipitation Friday through Nov. 9 across the Midwest allows for harvesting to resume and be completed in most areas. Winter wheat areas in the lower Midwest will benefit from the precipitation this week and the moisture should be great enough to allow most of the crop to become favorably established.

U.S. DELTA AND SOUTHEAST: The Delta and the Southeast will see mostly dry conditions and some harvesting today before Tropical Storm Zeta brings widespread rain to the region Tuesday through Thursday with another stretch of restricted precipitation expected Friday through Nov. 9 allowing for harvesting to resume and soon become aggressive again. Tropical Storm Zeta should make landfall as a weak hurricane in southeastern Louisiana Wednesday night before moving to northern Georgia and then Virginia Thursday with winds from the storm not likely to be strong enough to seriously threaten crops outside of coastal areas, but some cotton will be discolored by the rain and where rain is heavy and boll rot has occurred some cotton could be strung out and lost.

South America - Weather

BRAZIL: Showers and thunderstorms will bring additional rain to nearly all of Brazil and Paraguay through Friday leaving favorable soil conditions in much of the region before shower activity becomes focused on northern Brazil Saturday through Nov. 9. Rain during the past weekend and the expected rain through Friday should leave Parana and Sao Paulo with enough soil moisture to favorably support crop development through the next two weeks, but a boost in rain will be needed soon to ensure crops do not become stressed by a lack of soil moisture.

ARGENTINA: A drier weather pattern will begin today across Argentina and most areas will see little rain during the next two week and be much drier by that point in time allowing for good planting progress to be made while many western and northern areas will be left with short soil moisture and could see some crop stress.

O A few showers will occur in northeastern Argentina today with some beneficial rain from southern Cordoba and central San Luis to northwestern Buenos Aires Tuesday into Wednesday where rainfall totals will be 0.10-0.60" and locally more.

Europe, New Zealand and Australia - Weather

EUROPE: Rounds of precipitation will continue to expand over Western Europe the next ten days. Greater rainfall will be confined to southeastern France into Switzerland and surrounding areas as well as a small band from northeastern Germany into northwestern Poland today. Organized and widespread precipitation will return to the U.K., France and northern Spain Saturday into Sunday and shift into Switzerland, southwestern Austria, Italy, Slovenia and the eastern Adriatic Sea Nations early next week.

AUSTRALIA: Rain will continue over eastern Australia this week. The moisture will continue to benefit cotton, sorghum and other summer crops, but concern over northern winter crop quality will continue to increase until rainfall declines. Western Australia is still too dry and most locations will experience no significant changes
