

Weather Report

10 November 2020

South Africa - Weather

The main summer crop areas will see a good mix of rain and sunshine this week. The precipitation will be enough to slightly bolster soil moisture and continue to support generally favorable conditions for establishment and growth. Producers will also have opportunities to plant aggressively between rain events. Many areas will still need additional rainfall to completely fix the moisture deficits, though crop prospects are generally favorable. Western Cape and Northern Cape will otherwise be mostly dry this week. The environment will be favorable for aggressive winter wheat maturation and harvesting. Free State will otherwise receive enough rain to slow the harvest at times. Minor quality reductions will also be possible in the wettest locations.

United States of America - Weather

U.S. MIDWEST: The Midwest will see two rounds of precipitation by Sunday and fieldwork will be interrupted, but some harvested should advance between precipitation events as well on Nov. 16-23 when drier weather returns.

U.S.

DELTA AND SOUTHEAST: The Delta will continue to see dry weather most often and good harvest progress overall through the next two weeks while the southeastern states will see a period of wet weather Tuesday through Saturday with confidence still low for late this week as that is when Tropical Storm Eta should impact the region.

A wide variety of forecasts are still being made by the various computer forecast models for the track of Tropical Storm Eta after it moves northward from western Cuba Tuesday with World Weather, Inc. expecting the storm to move into the northwestern Florida Peninsula late this week before moving towards southeastern Georgia.

South America - Weather

BRAZIL: Brazil and Paraguay will see a timely increase in rain starting today that will continue through early next week and nearly all areas will receive enough rain to improve soil moisture and conditions for crop development with an exception from western into central Rio Grande do Sul where rain will be too light and infrequent to prevent significant drying. Another round of rain should occur in a large part of Brazil and Paraguay Nov. 20-22 and if that rain event occurs as advertised nearly all areas will be left with favorable conditions for crop development.

ARGENTINA: Continued drying will occur through Thursday in much of Argentina and good planting progress should be made while some crops in the drier western and northern areas see increasing levels of crop stress. Showers and thunderstorms will increase Friday into next Monday in the west and enough rain may fall to buy crops more time before serious stress evolves while eastern areas miss much of the rain. Drier weather will return Nov. 17-23 and planting should advance well while some crops in eastern, and especially northeastern, Argentina see rising levels of stress due to a lack of soil moisture.

Europe, New Zealand and Australia - Weather

EUROPE: Scattered showers will become confined to the Iberian Peninsula into western France and the U.K. into the North Sea as well as southern Norway and surrounding areas of Belgium, the Netherlands, Denmark and southwestern Sweden during the next week to ten days while mostly dry weather occurs elsewhere. Rain will be confined to the Iberian Peninsula through Friday and expand into portions of western France and the U.K. this weekend through early next week. The greatest rain in the U.K. and surrounding northwestern France will occur Monday into Wednesday.

AUSTRALIA: Infrequent and light rain will continue over eastern Australia this week further promoting favorable conditions for winter grain and wheat maturation and harvest. In the meantime, a soaking of rain would be welcome in east-central Australia to support summer crop development, but no such event is expected. Restricted precipitation and drying will occur over Western Australia the next ten days to two weeks. Conditions will not be completely dry, but rain that does occur will be limited to southern locations and infrequent most often.
