# South Africa - Weather

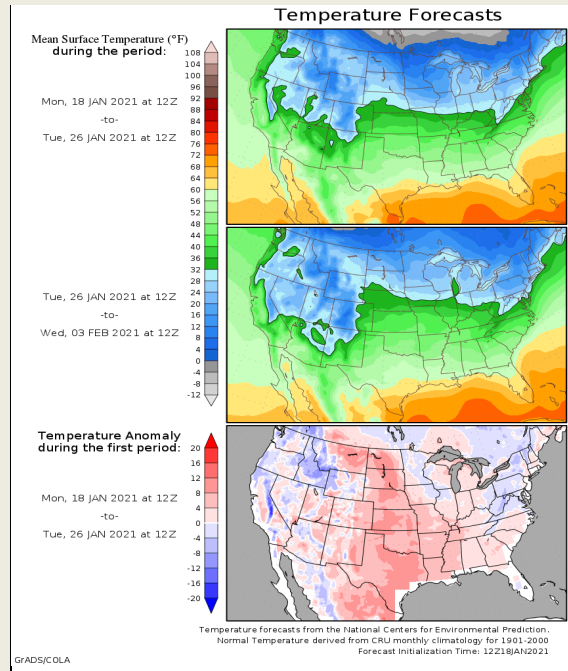

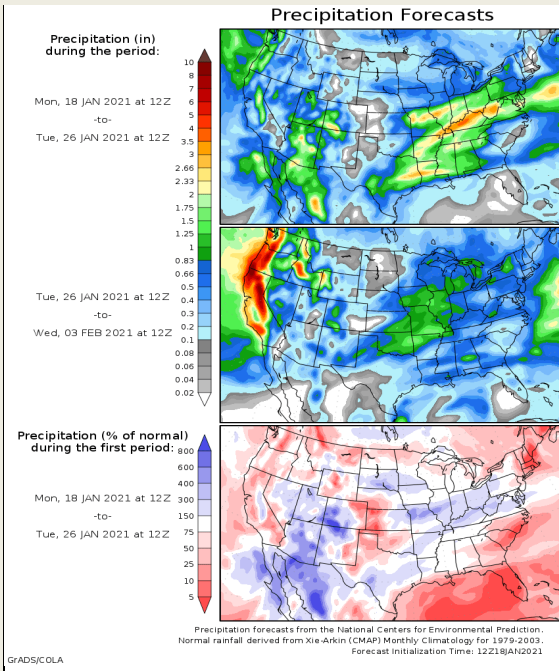

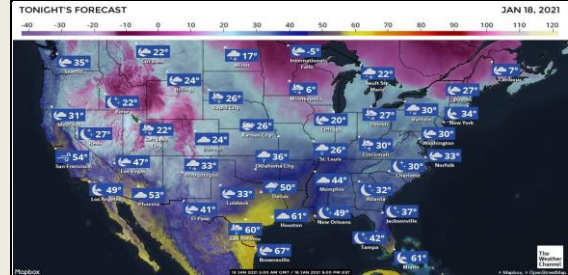

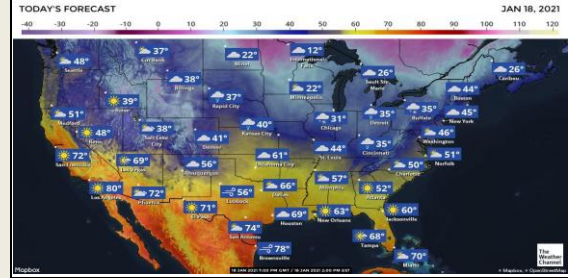

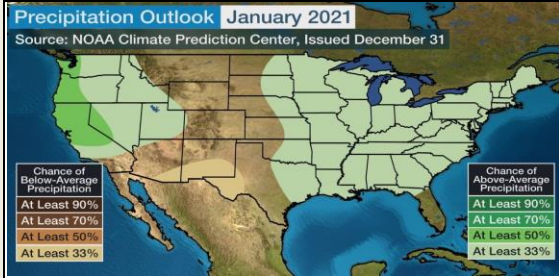

Alternating periods of erratic rainfall and sunshine will evolve for eastern and central South Africa through the end of next week. Rainfall will be enough to keep soil moisture rated adequately in most locations. Crop development conditions will remain favorable. Fieldwork may be sluggish during the periods of rain, though most producers will have opportunities to get into the fields between rain events.

# United States of America - Weather

**U.S. MIDWEST:** Blizzard conditions and some heavy snow will occur in portions of the western Corn Belt into Friday with regular occurrences of mostly light precipitation favoring the lower and eastern Midwest expected this weekend into next week.  
 o Strong winds and snow will create low visibilities and cause travel delays from eastern South Dakota into central Minnesota and western Iowa with similar conditions, but weaker winds, in a large part of the remainder of the western Corn Belt.  
**U.S. DELTA AND SOUTHEAST:** The Delta and the Southeast will see dry weather most common through Monday with precipitation more frequent Tuesday through Jan. 26 and some heavy rain possible next week in the Delta.  
 o Today will be mostly dry before light rain returns to parts of the region from northern Florida and Georgia to southern Virginia tonight into Friday.

# South America - Weather

**BRAZIL:** A good mix of rain and sunshine during the next two weeks will favorably support most developing crops in Brazil with an exception in parts of northeastern Brazil where soil moisture is already short and rain is not likely to be great enough to significantly improve soil conditions. Dryness will steadily expand into central and east-central Minas Gerais and Espírito Santo during the next two weeks as this region is disfavored for significant rain, but soil moisture there is still high enough to support crop development for a while longer.

**ARGENTINA:** Recent rain and rain expected today through Saturday should leave nearly all of Argentina with enough soil moisture to support developing crops into late this month, but with another period of warmer and drier weather occurring Sunday into at least Jan. 24 rain will be needed again in the last days of the month or in early February.

# Europe, New Zealand and Australia - Weather

**EUROPE:** Several rounds of precipitation will impact the U.K. and France, Belgium, the Netherlands into Switzerland and surrounding southwestern Germany the next ten days. Mostly light precipitation will occur in western France through the weekend, but moisture will increase next workweek throughout western portions of the nation.

**AUSTRALIA:** Net drying will occur over east-central to southeastern Australia during the coming ten days. Conditions will not be completely dry in eastern production areas of New South Wales and southeastern Queensland, but greater rainfall would be welcome and overall net drying will occur in many areas. Crop development should continue mostly favorable with soil moisture conditions, but some crop stress may evolve mid to late next week.
