

Weather Report

27 January 2021

South Africa - Weather

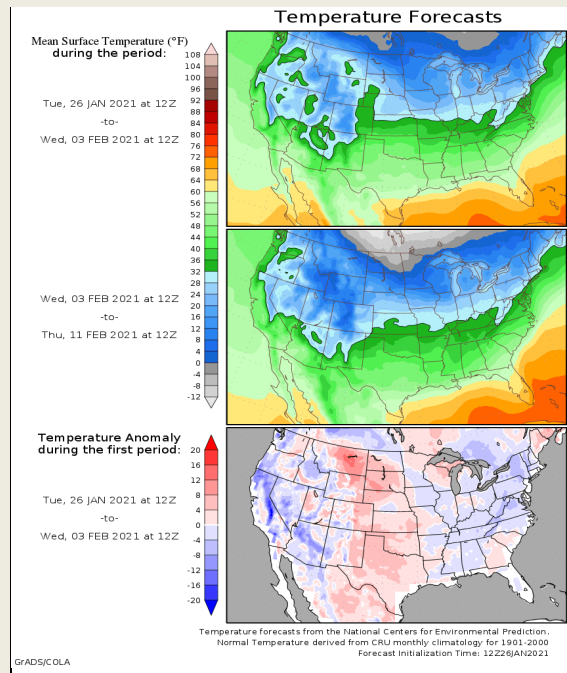

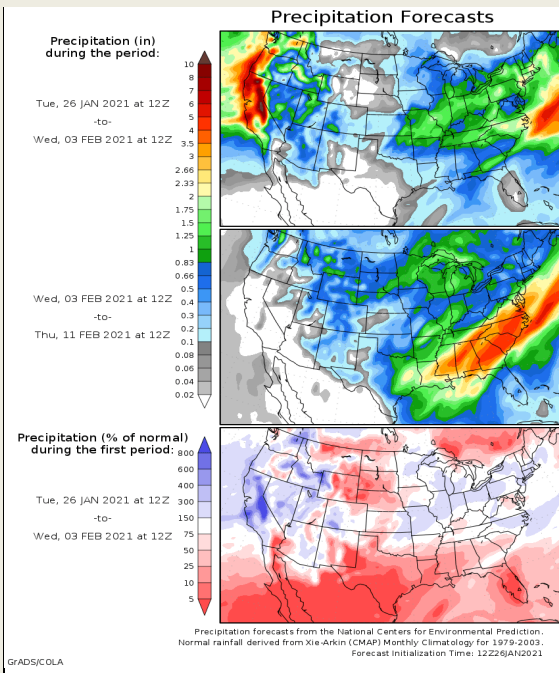

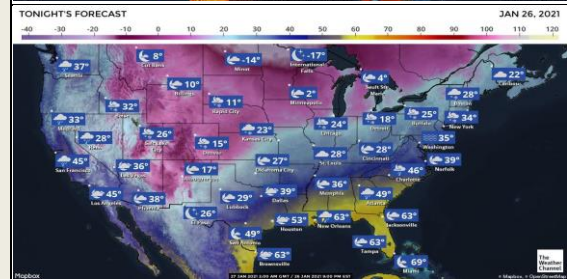

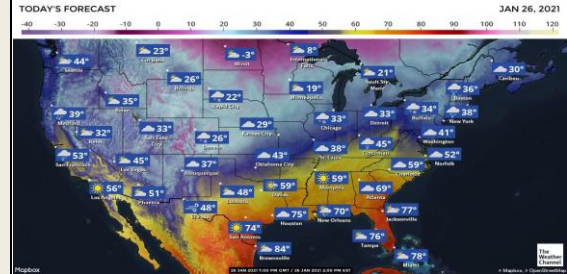

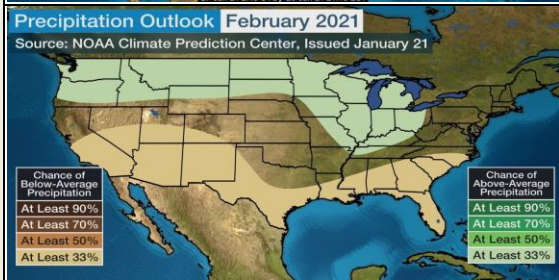

The main coarse grain and oilseed areas in eastern and central South Africa will see a good mix of rain and sunshine during the coming week. Periods of significant rain will evolve in Free State, North West, and neighboring areas through Thursday that may generate flash flooding. Crop and structural damage will be minimal. Crop development may briefly become sluggish in areas that receive the most rain, though the environment will still be mostly favorable.

United States of America - Weather

U.S. MIDWEST: The Midwest will see an active weather pattern through the next two weeks with most of the precipitation light.
 o Precipitation will be nearly widespread Saturday into Monday with the southwestern to the eastern Corn Belt wettest.
U.S. DELTA AND SOUTHEAST: The Delta and the Southeast will see a wet weather pattern through the next two weeks.
 o Some locally heavy rain and local flooding may occur with each round of precipitation, but most of the rain should be light to moderate and serious flooding should not occur.

South America - Weather

BRAZIL: The two-week outlook has not changed much since Monday and a temporary increase in rain is still expected in northeastern Brazil Monday into Wednesday of next week while rain should be infrequent enough in Mato Grosso Monday through Feb. 9 that some soybean harvesting and planting of second season corn should occur. Mato Grosso needs an infrequent rainfall pattern during the next three to four weeks to allow soybeans to be harvested as quickly as possible and to prevent further delays to planting of the second season corn crop.

ARGENTINA: Additional relief from dryness will result from regular rounds of rain through the next week and nearly all of the country will receive enough rain by Monday to at least temporarily improve topsoil moisture. Most areas should be left with enough soil moisture to support developing crops through the first week to ten days of February. Corrientes will be wettest and will see regular rounds of heavy rain through the middle of next week and some flooding is possible.

Europe, New Zealand and Australia - Weather

EUROPE: Not much has changed in the outlook since Thursday. Precipitation will continue to spread from northern Spain and France to southern Germany, Italy and the eastern Adriatic Sea Nations during this coming week. Precipitation will also spread into eastern Europe, Scandinavia and the U.K. this coming week, but the greater amounts of moisture will not occur until next workweek. Some pockets of limited precipitation will occur in a few areas in southeastern Spain near the coast as well as a few areas of eastern Europe.

AUSTRALIA: Rounds of rain will impact southeastern South Australia and southern New South Wales and Victoria this week, especially Thursday into Friday. Rounds of rain will also occur into coastal areas of east-central and northeastern New South Wales and southeastern Queensland, but interior areas of northern New South Wales and southern Queensland will dry down this week. Most of the rain will occur east of the Great Dividing Range in east-central Australia. The moisture will bolster soil moisture for improved dryland and irrigated cotton, sorghum and other crops in southeastern portions of the nation.
