

Weather Report

29 January 2021

South Africa - Weather

Significant rain will evolve from North West into Mpumalanga and neighboring areas during the next few days. Flash flooding will be possible in areas that receive the most rain, though crop damage will be minimal. Coarse grain and oilseed conditions will otherwise remain favorable. However, development may be sluggish at times in areas that receive the most rain.

United States of America - Weather

U.S. MIDWEST: The Midwest will see two rounds of nearly widespread precipitation through next Thursday with a band of significant snow in parts of the central and eastern Midwest this weekend before a powerful storm system Wednesday into next Thursday brings heavy snow to parts of the western Corn Belt.

U.S. DELTA AND SOUTHEAST: The Delta will see dry conditions most often through the next two weeks with exceptions this weekend and Feb. 4-5 when widespread precipitation falls while the Southeast sees precipitation during the same periods as well as Feb. 6-8.

o The precipitation should not be heavy enough to raise serious concerns over flooding.

South America - Weather

BRAZIL: An increase in rain will begin in some of the driest areas in northeastern Brazil Tuesday while Mato Grosso will see regular rounds of rain during the next two weeks that will slow fieldwork, but there will be breaks in the rain and some fieldwork, should advance around the precipitation. Mato Grosso needs a good mix of sunny weather and rainfall during the next three to four weeks to allow soybeans to be harvested as quickly as possible and to prevent further delays to planting of the second season corn crop.

ARGENTINA: Additional relief from dryness will result from regular rounds of rain through the next week and by Wednesday nearly all of the country will be left with enough soil moisture support developing crops through the first ten days of, and in many cases longer, February.
o Central and southern La Pampa into southern Buenos Aires should be the only area to miss out on significant rain and the region may see rising levels of crop stress as the soil moisture declines.

Europe, New Zealand and Australia - Weather

EUROPE: Not much has changed in the outlook since earlier this week. Rounds of precipitation will impact northwestern and west-central Europe into Germany, Switzerland, northwestern Austria and the Czech Republic as well as southern Italy and the Balkan Nations this week. The greatest moisture in the Balkan Nations and southern Italy will occur Friday into the weekend. Frequent precipitation will occur in northwestern portions of the continent.

AUSTRALIA: Additional rounds of rain will impact southern and central New South Wales and Victoria this week, especially today into Friday. Additional showers will return to southeastern locations Sunday into early next week. The moisture will bolster soil moisture for improved dryland and irrigated cotton, sorghum and other crops in southeastern portions of the nation. Meanwhile, a lack of moisture will occur over interior northern New South Wales and southeastern Queensland and dryness stress concerns for dryland cotton and grains will increase.
