

Weather Report

10 May 2021

South Africa - Weather

Very little rain is slated for the main coarse grain and oilseed areas through the end of next week. Harvesting will continue with few disruptions in most locations. Recent rainfall in Western Cape was enough to bolster soil moisture and support a better environment for early season winter wheat planting and establishment. The region will slowly dry down through the end of next week and a good soaking of rain would be welcome later this month. Free State and neighboring areas will otherwise be too dry to support aggressive wheat planting and establishment. South Africa will be drier biased through the end of next week. Light rain will still evolve from Western Cape into Eastern Cape, Natal, and neighboring areas through the end of the weekend.

- Portions of southern Western Cape, eastern fringes of Eastern Cape, and southern Natal will receive 0.50-1.50" of rain by next Friday morning
- Any rain that occurs elsewhere will be lost to evaporation
- South Africa will receive little to no rain May 15 - 21

United States of America - Weather

U.S. MIDWEST: The Midwest will see good planting progress during the next two weeks while the driest areas from the eastern Dakotas and northeastern Nebraska to northern Iowa and Wisconsin will be dry or will see only light rain through late next week.

- Today's forecast is wetter than advertised Thursday from central to east-central Iowa where significant rain is expected this weekend. Northern Iowa is not likely to see much moisture of significance. After this weekend's rain event, the next round of significant rain will occur May 15-17 and the moisture will be important to the drier areas in the western Corn Belt.

U.S. DELTA AND SOUTHEAST: Outside of period of frequent and significant rain Sunday through Thursday, the Delta and the Southeast will see dry conditions most often through the next two weeks and planting should advance well with next week's rain beneficial for the drier areas in the Carolinas and southern Virginia.

o Some heavy rain and local flooding is likely from the Delta into Georgia Sunday through Thursday.

South America - Weather

BRAZIL: Dry and favorable conditions for fieldwork will be most common in much of Brazil and Paraguay through the next two weeks with an exception in Paraguay and far southern Brazil where rain will fall Tuesday into Thursday.

- o Generalized increases in stress to the second season corn crop are likely during the next two weeks as the soil has become short of moisture and most of the region will see little to no rain through the next two weeks.
- o Interruptions to fieldwork in Paraguay and far southern Brazil should be temporary.

ARGENTINA: Today's forecast includes less rain than advertised Thursday for early next week as rain is now expected to be confined to some northern areas and crop maturation and harvest conditions will steadily improve through the next two weeks.

- o Cotton in northeastern Argentina should be discolored by rain Sunday night into Wednesday, but with the drier weather expected to follow the rain cotton fibers should bleach back to white.

Europe, New Zealand and Australia - Weather

EUROPE: Rounds of frequent precipitation will increase over the U.K., Portugal and northern Spain into France through northern Italy, Austria, and Germany into southern Scandinavia this week. Conditions will become wet and fieldwork will be sluggish Sunday through next weekend.

o Rain totals by this time next week will range from 0.75 to 2.50 inches and local totals varying up to 4.00 inches from France and northern Italy into central Germany.

o Otherwise, moisture totals will vary from 0.50 to 1.50 inches and locally more in surrounding areas.

AUSTRALIA: A restricted precipitation pattern will occur over most of Australia's major agricultural areas during the coming ten days to two weeks. With that said, increased shower and thunderstorm activity will return to east-central Australia Wednesday into next Friday, May 14. The brief disruption to mostly dry conditions will disrupt cotton and sorghum maturation and harvest, but conditions should improve quickly May 15-17. Any moisture will be welcome for winter wheat, canola and barley, but greater moisture will still be needed.
