

Weather Report

14 June 2021

South Africa - Weather

Dry weather will continue for much of South Africa through next Friday. Harvesting of the summer crops will advance swiftly. The winter wheat production areas will otherwise continue to dry down. Development in Western Cape will begin to slow as the ground firms, though no significant production impacts are expected. Irrigated crops in Free State and Northern Cape will continue to develop under generally favorable conditions. Dryland crops in Free State will otherwise establish and develop poorly or unevenly. • South Africa will be mostly dry during the coming week
o However, a disturbance will bring light rain to portions of Western Cape and western Northern Cape Monday and Tuesday
o Resulting rainfall will be lost to evaporation
• Much of South Africa will be drier than normal June 18 – 24
o Brief periods of light rain will still occur in a few locations

United States of America - Weather

U.S. MIDWEST: The Midwest will see warm to hot temperatures and dry weather most often through the next two weeks and by the fourth week of the month much of the region will significantly drier than today and stress to crops should have expanded outward from the eastern Dakotas and western Minnesota to eastern Nebraska, Iowa, Wisconsin, and Michigan. Most of the Midwest will see much warmer than normal temperatures through Monday with warmer than usual conditions continuing in the west Tuesday into Thursday when some eastern areas see near to below normal temperatures.

U.S. DELTA AND SOUTHEAST: The Delta and the Southeast will see daily rounds of showers and thunderstorms through Sunday and enough rain should fall to keep the planting pace slow in the wetter areas while the rain will be beneficial in the drier areas from Georgia to southern Virginia. The southern Delta to southern Mississippi will see the least rain and some planting should occur around the precipitation.

- Shower activity will decline next week and planting should increase around the few showers that occur while the drying will induce a growing need of rain from northern Florida and Georgia to southern Virginia.

South America - Weather

BRAZIL: Much of Brazil and Paraguay will see a restricted rainfall pattern and good harvest progress through the next two weeks with one round of organized rain expected and that event taking place June 18-19 when portions of Paraguay and southern Brazil receive rain.
 o Outside of June 18-19, totally dry conditions are not expected and showers will occur regularly with the resulting rain not likely great enough to have a significant impact on soil conditions or long-term drought.

ARGENTINA: Argentina will see dry weather most often during the next two weeks and good harvest progress should be made around a few rounds of mostly light showers while western Argentina will remain in need of greater rain to improve conditions for winter wheat.
 o Most days will be dry with a few light showers on occasion.
 o Light rain will increase from San Luis into Cordoba Wednesday into next Friday and many areas will receive up to 0.25" of rain and locally more.

Europe, New Zealand and Australia - Weather

EUROPE: Favorable soil moisture conditions will continue to be supported by periodic rain the next seven to ten days. Rounds of scattered rain will return to Europe during the middle of next week and replenish topsoil moisture throughout central portions of the continent. In the meantime, rounds of rainfall will be greatest in eastern portions of the continent from Poland and western Ukraine into Romania and Bulgaria.

AUSTRALIA: A period of drying will return to eastern Australia through most of Tuesday. The break in moisture will allow for fieldwork and to increase in areas that have been wetter during the first 10 days of June, but some greater rainfall is still needed over interior South Australia, northwestern Victoria as well as Queensland to restore soil moisture conditions. Scattered showers and thunderstorms will linger over eastern Victoria and southeastern New South Wales from the coast back into the Great Dividing Range into the weekend. Minimal to no rain will occur over areas west of the Great Dividing Range.
