

Weather Report

27 July 2021

South Africa - Weather

The main winter wheat areas in South Africa will be mostly dry this week. Wheat prospects will remain favorable in Western Cape due to periods of rain in recent weeks. Irrigated crops in Free State and Northern Cape will remain in mostly good condition as well. Dryland winter wheat prospects in Free State will remain poor until rain potentials increase. • South Africa will generally be drier than normal this week

- ▣ However, a frontal boundary will bring light rain to portions of Western Cape and neighboring areas Tuesday and Wednesday
- ▣ Portions of southwestern Western Cape will receive 0.25-1.00" of rain by next Monday morning
- However, most areas will not receive enough rain to counter evaporation
- Drier than normal weather is slated for most locations August 3 – 9
- o However, Western Cape and neighboring areas may again see periods of light rain

United States of America - Weather

U.S. MIDWEST: The two-week outlook is not as threatening for crops in the western Corn Belt as that advertised late last week as the heat in last week's forecast is now expected to break late this week instead of persisting beyond this weekend as was expected last week while rain has also been increased across the Midwest. Heat is still expected for a few days this week in the western Corn Belt (details below) and some crops should be stressed by the heat, but outside of the northwest, soil moisture should be high enough to keep temperatures from becoming excessively hot and that should prevent serious crop stress. Much of the Midwest will dry down during the next two weeks, but with a lack of heat starting late this week and adequate subsoil moisture in place outside of the northwest, conditions for crops outside of the far northwest should remain mostly favorable.

U.S. DELTA AND SOUTHEAST: The bottom line to the two-week outlook remains mostly favorable for crops in the Delta and the Southeast as regular rounds of rain will occur through the period keeping soil conditions favorable in much of the region. Temperatures will be warmer during the next week and some crops should be stressed by the heat, especially in the Delta where highs will reach the middle and upper 90s at times this week.

South America - Weather

BRAZIL: Dry weather and favorable conditions for fieldwork will be most common through the next two weeks in Paraguay and Brazil with a couple rounds of showers in the south as well as in the northeast. Showers will increase in southern Brazil and Paraguay into Wednesday with a few showers in parts of central and northeastern Brazil as well.

Most of the rain outside of the south will be light and should not have much of an impact on long term drought conditions, but the moisture will be welcome.

ARGENTINA: Most days will be dry during the next two weeks and fieldwork should advance well while conditions for winter wheat in the west will remain poor until rain returns.

Rain will fall on portions of Corrientes today where amounts will be up to 0.50" and locally more.

Europe, New Zealand and Australia - Weather

EUROPE: The most important weather in Europe over the next ten days will be the arrival of some much needed rain in the western Balkan Countries where it has been dry and very warm to hot the past couple of weeks. The moisture expected will bring needed change to the region's crops by replenishing topsoil moisture and reducing crop stress. Other areas in the continent will continue plenty wet especially from the heart of France to Poland, Slovakia and western Ukraine. Net drying is expected in far western France, the U.K., Scandinavia and from Portugal and Spain to southern Italy and Greece.

AUSTRALIA: Rounds of rain will continue to impact Western Australia and the southeastern corner of Australia providing a mostly favorable environment for winter wheat, barley and canola establishment this week. Although restricted precipitation and greater rain will still be welcome over portions of interior southeastern South Australia and into western New South Wales.
