

Weather Report

30 September 2021

South Africa - Weather

Eastern and central South Africa will continue to see a mix of rain and sunshine through the middle of next week. The rain will be enough to bolster soil moisture and support a better environment for both the irrigated and rain-fed winter wheat in Free State. Early season planting prospects for the summer grains, oilseeds, sugarcane, and other crops will also improve. Western Cape and Northern Cape will generally be drier biased through the middle of week. Southern Western Cape will still have a few opportunities for mostly light rain that will be too light to significantly impact long-term soil conditions. The outlook for winter wheat will remain good in much of Western Cape and the irrigated areas of Northern Cape. Eastern and central South Africa will see a mix of rain and sunshine during the coming week. Scattered showers and thunderstorms will evolve today into Friday as a disturbance tracks across the country. Periods of light and erratic rain will continue this weekend and early next week, most notably for Natal, Mpumalanga, and Limpopo. Moisture totals by next Wednesday morning will range from 1.50-4.00" and locally greater amounts in Natal, Eastern Cape, Free State, and Mpumalanga. North West and Limpopo will receive 0.50-1.50" of rain with drier pockets in Limpopo

United States of America - Weather

U.S. MIDWEST: The increase in rain advertised in Tuesday's forecast for Oct. 6-12 has been removed and a drier outlook has returned with less rain in the far northwestern Corn Belt during the next few days as well.

- Nearly widespread rain is still expected today through Sunday with eastern North Dakota into northwestern Minnesota seeing minimal rain while most of the eastern Corn Belt will be dry through Friday

U.S. DELTA AND SOUTHEAST: Frequent rain will fall through the next week in the Delta stalling fieldwork and raising concerns over cotton quality while the southeastern states will see good harvest progress around one round of rain occurring Sunday into Tuesday.

- Rain through Saturday will occur as far east as western Alabama with the precipitation from central Mississippi to western Alabama infrequent enough that fieldwork should advance around the rain.
- Drier weather will return Oct. 6-13 and harvesting should steadily ramp up in the Delta while aggressive fieldwork should occur in the Southeast.
- Some cotton discolored by rain during the next week should be bleached white.

South America - Weather

BRAZIL: Southern Paraguay and southern Brazil through Sao Paulo and southern Minas Gerais will see frequent rain through Oct. 10 and fieldwork will be slowed, especially from southern Paraguay to Parana and Santa Catarina where some heavy rain is expected.

- o Some improvements in long-term drought conditions should result.
- Mato Grosso and northern Mato Grosso do Sul into Goias will see some showers of limited significance through Oct. 7 with the moisture likely quickly lost to evaporation in the hot temperatures expected.
- o Shower activity will increase across western Brazil Oct. 8-10 and conditions for planting and establishment of crops should improve.

ARGENTINA: Two rounds of organized rain will occur during the next two weeks and most of southern, central, and eastern Argentina will be left with adequate to favorable soil conditions for establishment and development of crops.

- o West-central and northwestern Argentina will miss much of the significant rain, but at least some light rain will fall on the region and winter wheat should benefit from the moisture.
- o Much more rain will be needed to induce lasting improvements in soil moisture and conditions for winter wheat.

Europe, New Zealand and Australia - Weather

EUROPE: Europe precipitation will be limited and weather conditions will be favorable for advancing fieldwork, including planting of winter crops and the harvest of summer crops.

o With that said, rain will disrupt fieldwork some in the U.K. through southern Scandinavia today into Friday and eventually expand into France, portions of Germany, northern Italy, Austria, Slovenia and Italy to this weekend into Monday.

AUSTRALIA: Rain will increase Tuesday into Friday in eastern Australia and will be great for reproducing winter crops and filling and maturing wheat in Queensland. The greatest rain will occur today into Wednesday and linger into Thursday and Friday. Moisture will be sufficient to bolster topsoil moisture and provide beneficial moisture to most crop areas from southeastern South Australia, Victoria into New South Wales and southeastern Queensland.

o Rain totals will vary from 0.50 to 1.50 inches and local totals up to 3.00 inches.
