

Weather Report

06 September 2021

South Africa - Weather

Free State will have opportunities for rain during the coming week that will marginally increase topsoil moisture. Additional precipitation will still be needed to significantly improve dryland winter wheat conditions. Irrigated wheat prospects in Free State will remain favorable. Western Cape and Northern Cape will otherwise receive little to no rain through the end of next week. Winter wheat conditions will remain mostly favorable in Western Cape and Northern Cape despite the lack of rain. Eastern Cape, Natal, and Free State will see a mix of rain and sunshine during the coming week. Scattered showers will begin this weekend and continue into Tuesday. Dry or mostly dry weather will occur most other days during the coming week. Southern Natal, southeastern Free State, and eastern sections of Eastern Cape will receive 0.75-3.00" of rain with local amounts of 5.00" or more along the coast. Other areas will receive 0.25-1.50" of rain. Most other locations will receive 0.10-0.50" of moisture by next Thursday morning. The remaining portions of South Africa will be mostly dry through the end of next week. Western Cape, North West, and Mpumalanga will have a few opportunities for light rain, though resulting rainfall will generally be lost to evaporation. South Africa will be drier biased September 11 - 17. Light rain will still occur at times in southern and eastern South Africa.

United States of America - Weather

U.S. MIDWEST: Favorable for conditions for late crop development will occur through the next week as soil moisture is high enough to support the needs of most crops to maturity during a period of drier weather and favorable conditions for crop maturation that will begin Sunday and continue beyond the middle of the month. Little rain of significance is expected in the northwestern Corn Belt through the next two weeks and the region will need rain later this month to maintain the improvements in soil moisture occurred recently. Temperatures will be not far from normal through the next week and the highs in the 70s to the middle 80s that will be most common will be favorable for late crop development and crop maturation.

U.S. DELTA AND SOUTHEAST: A drier weather pattern will occur in the Delta and the Southeast during the next two weeks with the only organized rain expected occurring Sunday into Monday from the Delta to northern Alabama.

o The drying expected will be highly beneficial in areas that received heavy rain from Ida while parts of the southern and northern Delta would benefit from greater rain.

South America - Weather

BRAZIL: Much of Brazil will see little to no rain of significance and favorable conditions for fieldwork through the next two weeks with some exceptions in the northeast where showers will continue through Friday and in southern Paraguay and far southern Brazil where rain will increase Saturday into Sep. 9.

- o Showers will occur in a few northwestern locations Sep. 10-15 with the resulting rain not likely great enough to have a significant impact on soil conditions.

ARGENTINA: Rain this week and additional rain into Tuesday should be great enough to at least temporarily improve conditions for winter wheat in western Argentina.

- o Soakings of rain are not expected in many western Argentina locations, but enough rain should fall to allow wheat to develop favorably once it comes out of its semi-dormant state.
- o Rain will need to return soon in western Argentina as the soil will quickly dry out again without follow-up rain.
- Most of the remainder of Argentina will also receive rain during the next week with some heavy rain in the north Sunday into Tuesday.

Europe, New Zealand and Australia - Weather

EUROPE: Rainfall will continue over Spain into portions of northern Portugal during the coming week. Some of the moisture will reach into west-central and southern portions of France through Switzerland and northern Italy this coming week. Rain will also increase over southern portions of Italy, Greece and surrounding areas this weekend into early next week.

AUSTRALIA: A cool down will continue to progress west to east through this weekend and linger over eastern portions of Australia into the middle of next week. A brief increase in scattered rain will occur over southern Queensland wheat, barley and canola production prior to the cold weather this weekend and linger into Monday. In the meantime, beneficial rounds of timely rain will occur over southern portions of the nation, especially southeastern locations, during the next ten days. Timely rainfall will continue to provide a favorable environment for winter wheat, barley and canola the next couple weeks.
