# South Africa - Weather

A good mix of rain and sunshine will prevail over the next two weeks supporting normal summer crop development and favorable late season planting. Far western summer crop areas would benefit from a boost in rainfall. Dry weather in the west will be good for wheat harvesting. • Alternating periods of rain and sunshine will occur through the next ten days  
o Daily rainfall will vary up to 0.75 inch most often with a few amounts of 1.00 to 2.00 inches  
o The precipitation will occur often enough to support most crop development needs  
o Far western portions of summer crop country will have the poorest distribution of rain, but that region is also more frequently irrigated than areas to the east

# United States of America - Weather

U.S. MIDWEST: Fieldwork should advance well overall during the next two weeks as the precipitation expected should not be heavy enough to cause excessively muddy conditions and fieldwork should occur between precipitation events.

- o Good opportunities for harvest the few remaining soybeans in the east will occur Saturday afternoon into next Wednesday when mostly dry weather is expected.
- o A significant storm system will impact the region will Friday into early Saturday with heavy snow likely fall from southeastern South Dakota and northeastern Nebraska to a large part of Wisconsin.

U.S. DELTA AND SOUTHEAST: Much of the Delta and the Southeast will receive rain Friday into Saturday causing interruptions to fieldwork and discoloring some unharvested cotton before drier weather Sunday into Wednesday allows fieldwork to resume and cotton to be bleached white.

- o The Southeast will see a few more days of mostly dry weather and favorable conditions for fieldwork while the Delta sees another round of rain Dec. 16-18.
- o Another round of precipitation will occur Dec. 19-21.
- o The precipitation expected through the next two weeks will be good for winter crops.

South America - Weather

**BRAZIL:** Paraguay and southern Mato Grosso do Sul to Rio Grande do Sul, Santa Catarina, and Parana will benefit from rain into Thursday and most areas will see important increases in topsoil soil moisture that will at least temporarily improve conditions for crops. The remainder of Brazil will see frequent rain and favorable conditions for crop development through the next two weeks.

**ARGENTINA:** Most of Argentina will see favorable conditions for planting and development of crops during the next ten days to two weeks, but rain during the period is not likely to be great enough to prevent many areas from drying down overall and some of the drier areas may see rising levels of crop stress in the last week of the month.

# Europe, New Zealand and Australia - Weather

**EUROPE:** Regular rounds of precipitation will continue throughout Europe this week. The most frequent moisture will impact the northern coast of Spain, France into portions of Germany and the Alps as well as Italy into Slovenia, Croatia, Bosnia and Montenegro into Hungary and Slovakia today through the Monday. Moisture will increase over the U.K. and into France Tuesday into Wednesday as well as southeastern portions of the continent.

**AUSTRALIA:** Harvest of winter crops and fieldwork will improve over Australia this week, especially areas that have been wettest over New South Wales and southeastern Queensland in November and the first days of December. The lack of rain will allow crop maturation and harvest to occur uninterrupted in many locations and rain that does occur will be brief and erratic and slow fieldwork briefly. The greatest shower and thunderstorm activity will impact the central coast of Queensland today into Saturday and return to southeastern Australia near the coast Tuesday into Wednesday. Totals will vary from 0.05 to 0.80 inch and local totals up to 2.50 inches.
