

Weather Report

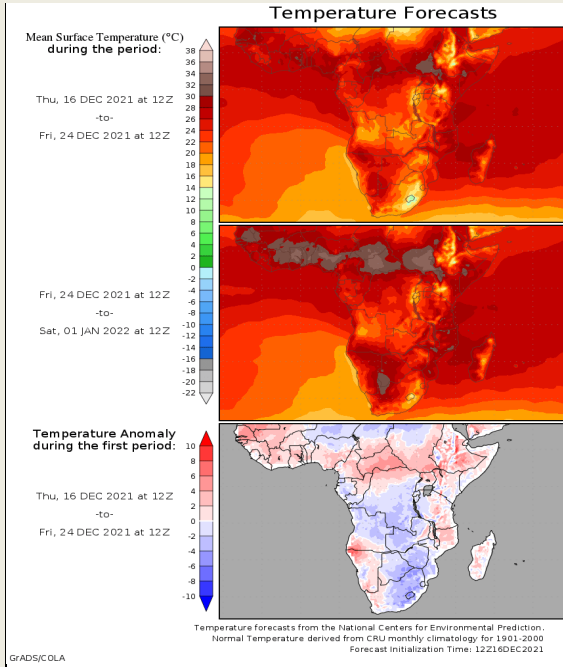

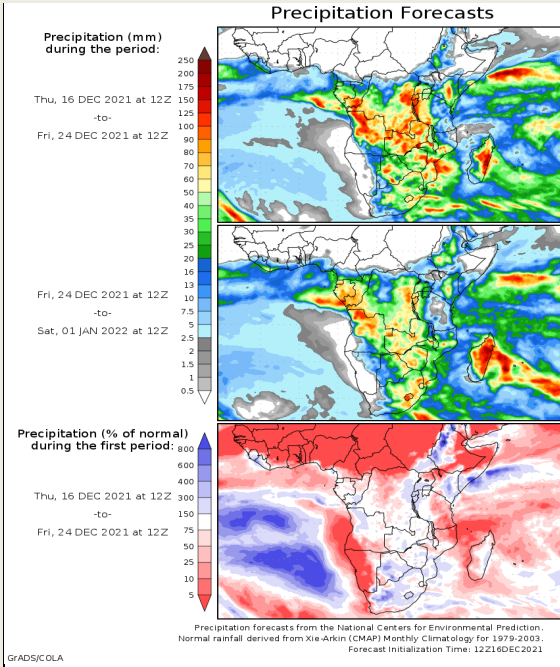

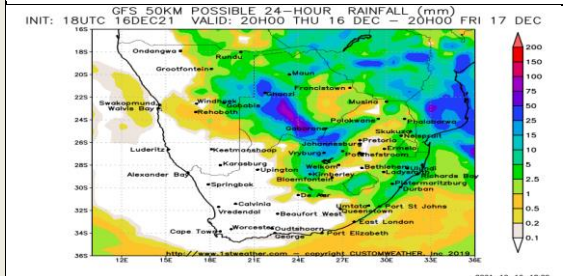

17 December 2021

South Africa - Weather

Scattered showers and isolated thunderstorms will continue on a frequent basis for the main production areas in South Africa during the coming week. Rainfall will be enough to either keep soil moisture near current levels or bolster soil moisture. The environment will remain favorable for aggressive establishment and growth. Planting and general fieldwork may be sluggish during the wetter periods, though producers will still have opportunities to get into the fields. Eastern and central South Africa into Northern Cape will see erratic rain evolve on a frequent basis during the coming week. A frontal boundary will initially promote scattered showers today. A disturbance will bring more rain to the region Friday into Monday with another disturbance likely generating more rain Tuesday and Wednesday. Moisture totals by next Thursday morning will range from 0.75-3.00" and local amounts of 4.00" or more in Natal and neighboring areas. Drier pockets are also expected in Northern Cape. Western Cape will be mostly dry during the coming week. Any rain that does occur will be lost to evaporation. Eastern and central South Africa will see a mix of rain and sunshine December 24 - 30. Western South Africa will be drier biased.

United States of America - Weather

U.S. MIDWEST: mostly quiet weather pattern will be in place during the next two weeks with a couple exceptions. Southeastern Missouri to southern Ohio and Kentucky will see daily rain into Saturday with some heavy rain and local flooding Friday into Saturday along with some strong to severe thunderstorms. The next significant winter storm system to impact the region may occur Dec. 24-26 with confidence for this event low. Another day of unseasonable warmth will occur today from southeastern Missouri to Michigan, Ohio, and Kentucky where most areas will see highs in the upper 50s to the middle 60s while the remainder of the Midwest is much cooler than Wednesday.

U.S. DELTA AND SOUTHEAST: The Delta and the Southeast will see a few rounds of precipitation through the next two weeks with fieldwork likely to advance around the moisture.

o The driest areas from southeastern Georgia and northeastern Florida will benefit from rain this weekend with most of the moisture across the Delta and the Southeast beneficial for winter crops.

South America - Weather

BRAZIL: A restricted rainfall pattern will be in place during the next two weeks from Paraguay to Parana, Santa Catarina, and Rio Grande do Sul and stress to crops should increase with serious stress and declining yield potentials from central Paraguay to western Parana. Soil moisture is already short from central Paraguay to western Parana and with only one round of organized showers expected during the next ten days, stress to crops should continue to increase and may reduce yields.

o A large part of the region may receive at least some rain Monday into Wednesday, but amounts will be mostly light and should do little more than briefly moisten the soil

ARGENTINA: Favorable conditions for planting will continue in much of Argentina during the next two weeks as a restricted rainfall pattern will be in place while stress to crops is likely to increase in some northern, central, and eastern areas as the soil dries out.

o The best conditions for crops will occur from western into southern Cordoba, southern Santa Fe, and San Luis to La Pampa to south-central Buenos Aires where showers will occur Friday through next Thursday and soil moisture is still favorable.

Europe, New Zealand and Australia - Weather

EUROPE: Regular rounds of precipitation will continue throughout Europe this week. The most frequent moisture will impact the northern coast of Spain, France into portions of Germany and the Alps as well as Italy into Slovenia, Croatia, Bosnia and Montenegro into Hungary and Slovakia today through the Monday. Moisture will increase over the U.K. and into France Tuesday into Wednesday as well as southeastern portions of the continent.

AUSTRALIA: Restricted precipitation will allow harvest of winter crops and fieldwork to progress favorably through Tuesday in most locations. Precipitation that does occur will be erratic and brief enough that quality issues should not be a major concern in most locations, although a few stronger storms over New South Wales may raise some concern in a small portion of the state.
