

Weather Report

06 December 2021

South Africa - Weather

Frequent rainfall will continue for eastern and central South Africa through the end of next week. Rainfall will be enough to gradually bolster soil moisture across the main production areas. Summer grain, oilseed, cotton, and other crop establishment and growth conditions will either improve or remain favorable. Planting may be sluggish during the periods of wetter weather, though producers will still have opportunities to get into the fields between rain events. Western Cape and Northern Cape will also see periods of erratic rain through the end of next week as well. Rainfall may slow late season winter wheat harvesting, though much of the crop should already be out of the ground. Cotton in Northern Cape will benefit from the rain. Eastern and central South Africa will see waves of erratic rain through the end of next week. A slow-moving disturbance will generate scattered showers and thunderstorms through Monday
 ☐ Light rain will be restricted to eastern South Africa Monday and Tuesday before returning to central South Africa Wednesday and Thursday
 ☐ Moisture totals by next Friday morning will range from 1.50-5.00" and local amounts of 7.00" or more in Natal, Mpumalanga, and eastern Free State

United States of America - Weather

U.S. MIDWEST: Fieldwork will advance well overall during the next two weeks as dry weather will be most common, but showers will occur often enough in some eastern areas that late soybean harvesting will be slowed at times.

- o Most of the precipitation will be light and most fieldwork should quickly resume after the precipitation ends, but the few remaining unharvested soybeans may not dry out fast enough to be harvesting to occur for extended periods.
- o The most significant storm system to impact the region will occur Dec. 10-12 with confidence for the details of this event low.

U.S. DELTA AND SOUTHEAST: Today's forecast is wetter for the Delta and the Southeast and after dry weather ends during the day Friday a period of wet weather will occur Friday night through Dec. 13 and late harvesting will be slowed.

- o Most of northern Florida and southern Georgia to southern Virginia will be dry into Tuesday while rain falls regularly further west starting Friday night.

South America - Weather

BRAZIL: Far southern Brazil and southern Paraguay will see a restricted rainfall pattern through most of the next two weeks and will see at least ten more days of little to no significant rain with a low-confidence rain event possible Dec. 14-16. Today's forecast is wetter than what was advertised earlier this week from central and northern Paraguay through Parana and Sao Paulo as enough rain is now expected Thursday into Sat., Dec. 11 to at least temporarily improve topsoil moisture and buy crops more time before serious crop stress evolves.

ARGENTINA: Today's forecast is wetter for Dec. 12-14 and if that rain event occurs as advertised portions of central and eastern Argentina that are expected to see little to no rain through Dec. 11 will benefit from the moisture.

o Additional rain and increases in soil moisture will occur into Saturday from San Luis to eastern La Pampa and western into central Buenos Aires.

o Parts of west-central and northwestern Argentina will see rain as well with other areas mostly dry.

Europe, New Zealand and Australia - Weather

EUROPE: Regular rounds of precipitation will continue throughout Europe this week. The most frequent moisture will impact the northern coast of Spain, France into portions of Germany and the Alps as well as Italy into Slovenia, Croatia, Bosnia and Montenegro into Hungary and Slovakia today through the Monday. Moisture will increase over the U.K. and into France Tuesday into Wednesday as well as southeastern portions of the continent.

AUSTRALIA: A restricted precipitation pattern will occur through Sunday. Summer crop production potentials will remain good after recent rainfall, but the break in moisture will be welcome for unharvested winter crops and fieldwork. ☐ Conditions will not be completely dry ☐ Rounds of showers will linger over the eastern coast of New South Wales and southeastern Queensland back into the Great Dividing Range on a near daily basis. A few showers will linger over central Victoria and south-central New South Wales today.
