

Weather Report

09 December 2021

South Africa - Weather

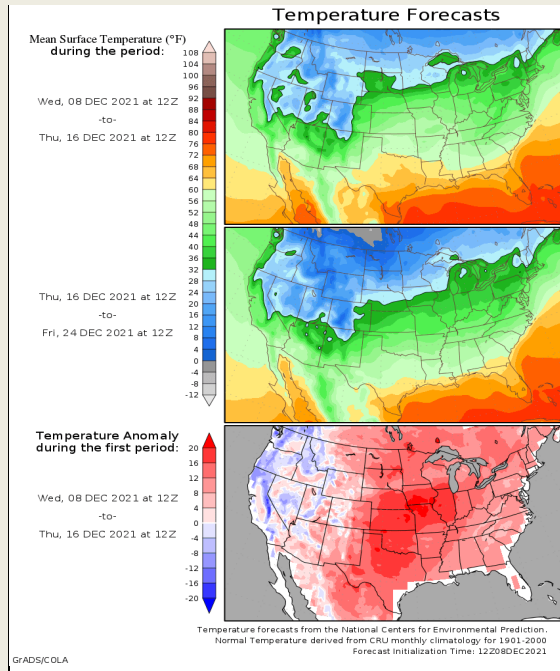

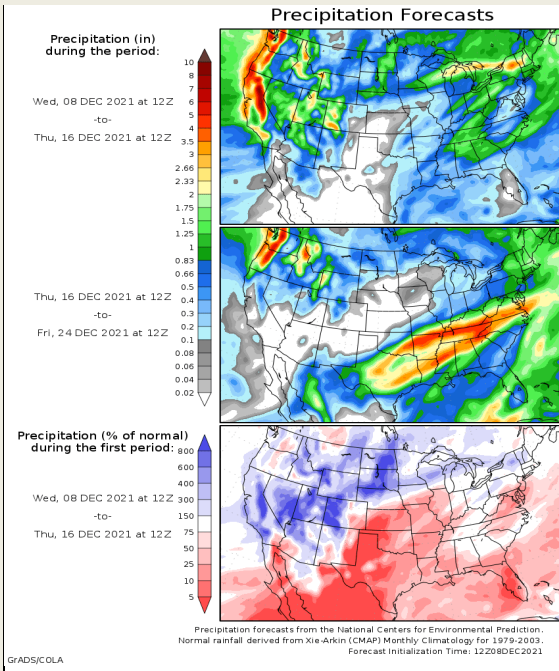

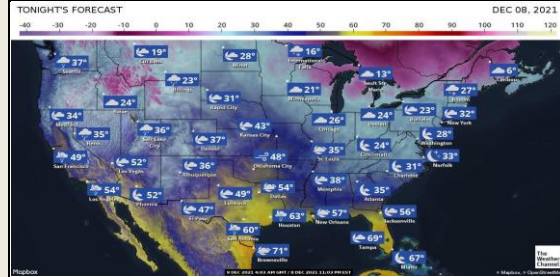

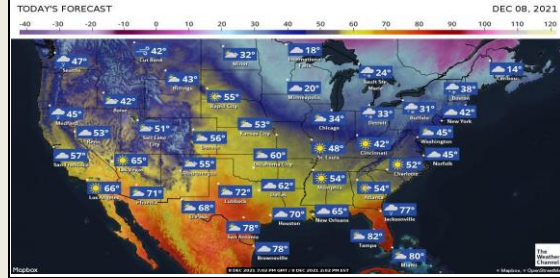

Eastern and central South Africa will continue to see several waves of erratic rainfall through the middle of next week. Rainfall will be enough to gradually bolster soil moisture in most coarse grain, oilseed, and cotton areas. Planting and establishment conditions will either improve or remain favorable. Aggressive growth is expected for most locations as well. Northern Cape and Western Cape will generally be drier biased during the coming week, though brief periods of light rain will still occur. Fieldwork will advance swiftly in most locations. Cotton conditions in Northern Cape will also be mostly good. Eastern and central South Africa will see rain scattered across the region on a near daily basis through the middle of next week o Some of the most significant rain will occur Thursday through Monday o Moisture totals by next Wednesday morning will range from 1.50-5.00" and local amounts of 7.00" or more in Natal, Mpumalanga, and Limpopo • Western Cape and Northern Cape will be drier biased during the coming week o Although light rain will occur at times in Western Cape and eastern Northern Cape, resulting rainfall will be lost to evaporation • Eastern and central South Africa will again have several opportunities for rain December 16 – 22 o Western South Africa will again be drier biased

United States of America - Weather

U.S. MIDWEST: Fieldwork should advance well overall during the next two weeks as the precipitation expected should not be heavy enough to cause excessively muddy conditions and fieldwork should occur between precipitation events.
 o Good opportunities for harvest the few remaining soybeans in the east will occur Saturday afternoon into next Wednesday when mostly dry weather is expected.
 o A significant storm system will impact the region will Friday into early Saturday with heavy snow likely fall from southeastern South Dakota and northeastern Nebraska to a large part of Wisconsin.
 U.S. DELTA AND SOUTHEAST: The Southeast will see a wet weather pattern through Saturday with the Delta seeing rain Friday into Saturday causing late harvesting to be slowed while some unharvested cotton should be discolored.
 o Sunday through Dec. 22 will be drier and fieldwork will increase while some cotton should be bleached white with one round of precipitation expected Dec. 17-18.

South America - Weather

BRAZIL: Rio Grande do Sul will see a restricted rainfall pattern through the next two weeks and some newly planted crops may see rising levels of crop stress as the topsoil dries out while subsoil moisture should be high enough to support crops with developed root systems for a while longer. Subsoil moisture may become short beyond the middle of the month and stress to crops should steadily increase until rain returns. Areas from Paraguay and Mato Grosso do Sul to Santa Catarina, Parana, and Sao Paulo will receive significant and beneficial rain Saturday through Monday.

ARGENTINA: West-central into southern Argentina will see favorable conditions for planting and development of crops during the next two weeks while rain in northern, central, and east-central areas will not be great enough to prevent rising levels of crop stress in some areas. The best conditions for crops will occur in west-central and southwestern Argentina where significant rain is advertised for into Thursday and follow-up showers will occur Friday into Sunday.

o Most of the remainder of Argentina will see rain Friday through Sunday before dry weather is most common Monday through Dec. 22 and good planting progress occurs.

Europe, New Zealand and Australia - Weather

EUROPE: Regular rounds of precipitation will continue throughout Europe this week. The most frequent moisture will impact the northern coast of Spain, France into portions of Germany and the Alps as well as Italy into Slovenia, Croatia, Bosnia and Montenegro into Hungary and Slovakia today through the Monday. Moisture will increase over the U.K. and into France Tuesday into Wednesday as well as southeastern portions of the continent.

AUSTRALIA: A restricted precipitation pattern will occur through Sunday. Summer crop production potentials will remain good after recent rainfall, but the break in moisture will be welcome for unharvested winter crops and fieldwork. ☐ Conditions will not be completely dry ☐ Rounds of showers will linger over the eastern coast of New South Wales and southeastern Queensland back into the Great Dividing Range on a near daily basis. A few showers will linger over central Victoria and south-central New South Wales today.
