

Weather Report

06 January 2022

South Africa - Weather

Frequent rainfall will persist for the main production areas in South Africa through the middle of next week. The rain will be enough to bolster or keep soil moisture at adequate to excessive levels. Flash flooding will remain a concern in Natal and Mpumalanga, though no significant crop damage is expected. The environment will remain favorable for aggressive coarse grain, oilseed, cotton, and other crop development. South Africa will see a mix of erratic rainfall and sunshine through the middle of next week

o Disturbances will generate scattered showers and thunderstorms in eastern and central South Africa through Saturday

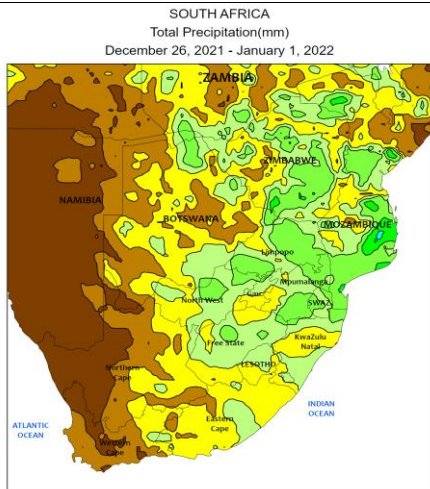

o More widespread rainfall will evolve Sunday into Tuesday

o Moisture totals by next Wednesday morning will range from 0.75-4.00" with locally greater amounts in Natal and Mpumalanga

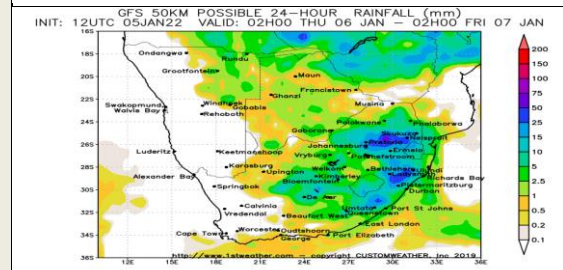

o Portions of Limpopo and Western Cape will also only receive 0.25-0.75" of rain

o Eastern and central South Africa will again have several opportunities for rain January 13 – 19

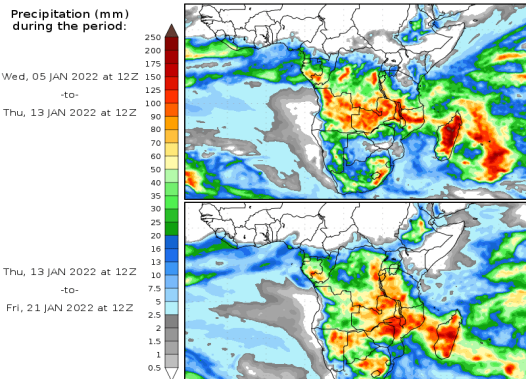

o Western South Africa will receive little to no rain

United States of America - Weather

U.S. MIDWEST: The Midwest will see a quiet weather pattern through most of the next two weeks with a few rounds of mostly light precipitation into this weekend.
 o Precipitation will be greatest near and south of the Ohio River this weekend and additional increases in river and stream flows will result leaving the region prone to a quick increase in flooding if a heavy precipitation event were to occur soon.

U.S. DELTA AND SOUTHEAST: A mostly tranquil weather pattern will be in place during the next two weeks in the Delta and the Southeast outside of some light showers Wednesday into Thursday and widespread rain Saturday into Sunday.
 o Some of the driest areas from southeastern Georgia and nearby Florida to central and eastern South Carolina will benefit the precipitation, but much of the rain will be light and greater rain is needed to fully restore soil moisture.

South America - Weather

BRAZIL: Paraguay and most of southern Brazil will see daily showers through the next ten days and although the rain will be erratic and light most often, most of the region will receive enough rain to improve conditions for crops.
 o Temperatures will not be as hot as what occurred recently and the reduced evaporation rates will allow crops to better-utilize moisture from the expected rain.

ARGENTINA: Today's forecast is hotter and drier through the next week and outside of a few showers in the west, dry weather will be most common through Tuesday and a steady increase and expansion of crop stress is likely as moisture from recent rain is lost to evaporation.
 o Today through Friday will be not be as hot as last week and stress to crops should slowly increase before temperatures become hot again this weekend into next week and crop stress and declines in yield potential accelerate.

Europe, New Zealand and Australia - Weather

EUROPE: Rounds of precipitation will continue to maintain moist conditions throughout the North Sea Region into France, Germany, Switzerland and northeastern Italy as well as southern Scandinavia this week. Moisture will reach into the northwestern Balkan Nations Thursday into early next week and may expand into portions of the southeastern Balkan Nations early next week.

AUSTRALIA: Rain will increase over southeastern portions of the continent today into Friday limiting fieldwork and raising concern over unharvested winter grains. Scattered showers will linger over central and northern New South Wales into southern Queensland this weekend and return to southeastern South Australia, Victoria and into New South Wales Monday into next Friday. The additional moisture will continue to hinder crop maturation and harvest and some concern over winter crops will prevail in the wettest locations, but precipitation should be scattered enough that some progress will occur in breaks in the moisture.
