

Weather Report

11 January 2022

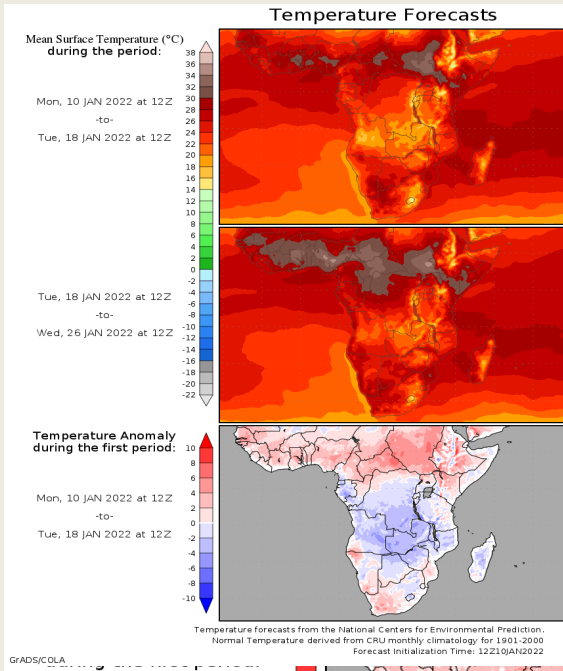

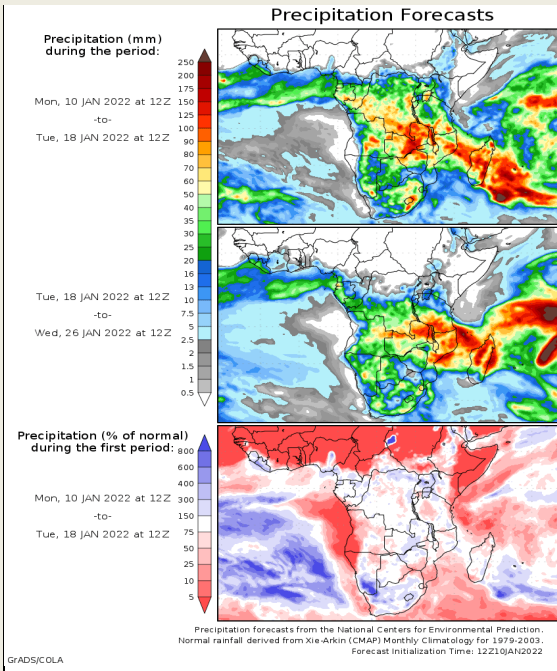

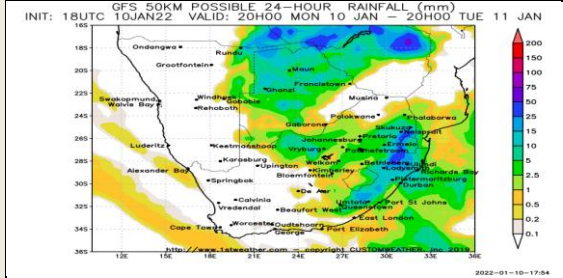

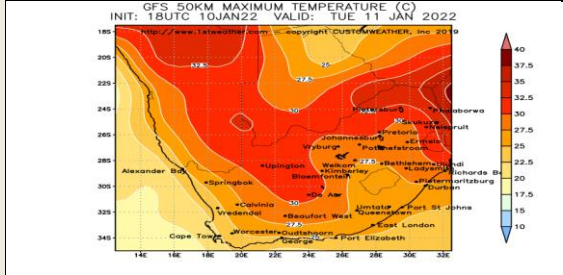

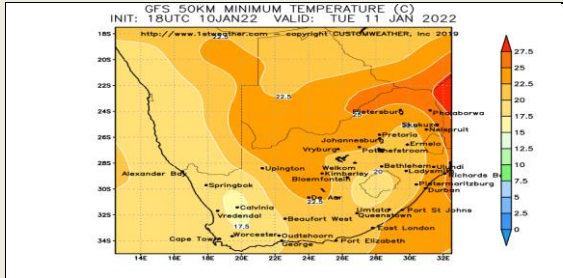

South Africa - Weather

The main production areas in South Africa will see several waves of erratic rainfall this week. Precipitation totals will be enough to keep soil moisture at adequate to excessive levels. Flash flooding will be a concern, most notably in Natal and neighboring areas where some of the most significant rain will occur. However, precipitation will be spread out enough to limit severe flooding. Development may be sluggish in areas with excessive moisture. Drier weather will be needed later this month to ensure mostly favorable crop conditions in areas that are too wet for ideal crop growth.

- South Africa will see erratic rain evolve on a near daily basis as a series of disturbances advance over the country
- o Rainfall will initially be restricted to eastern and central South Africa through Wednesday before spreading to western South Africa later this week and weekend
- o Moisture totals by next Monday morning will range from 1.50-4.00" in eastern and central South Africa
- Local rain totals of 6.00" or slightly more will also be possible in Natal and neighboring areas while drier pockets occur in northern Limpopo
- o Western South Africa will receive 0.35-1.50" of rain and locally greater amounts
- Much of South Africa will see a mix of erratic rain and sunshine January 18 – 24

United States of America - Weather

U.S. MIDWEST: The Midwest will see a quiet weather pattern through most of the next two weeks with a few rounds of mostly light precipitation.
 o Precipitation will be greatest near and south of the Ohio River this weekend and additional increases in river and stream flows will result leaving the region prone to a quick increase in flooding if a heavy precipitation event were to occur soon.

U.S. DELTA AND SOUTHEAST: A mostly tranquil weather pattern will be in place during the next two weeks in the Delta and the Southeast outside of some light precipitation today, widespread rain Saturday into Sunday, and some light precipitation Jan. 13-14.
 o Some of the driest areas from southeastern Georgia and nearby Florida to central and eastern South Carolina will benefit the precipitation, but much of the rain will be light and greater rain is needed to fully restore soil moisture.

South America - Weather

BRAZIL: Paraguay to western Parana, western Santa Catarina, and Rio Grande do Sul will see little to no rain of significance and hot temperatures through Saturday and steady increases in crop stress and declining yield potentials are expected. Rio Grande do Sul will be driest and with soil moisture short crop in most of the state yields should decline. A shift in the weather pattern will begin this weekend when light and mostly inconsequential showers occur before showers and thunderstorms become better organized Sunday through Jan. 19 with additional rain Jan. 22-24.

ARGENTINA: Hot and dry weather will continue into this weekend and crops will continue to suffer with some recently planted crops possibly withering and dying while the early corn crop that is pollinating should see rapid declines in yield potentials. The weather pattern will change this weekend and rain will fall regularly Saturday through Jan. 23 with good coverage of rain overall during the period and at least temporary improvements in crop conditions likely. As long as additional rain falls in the last week of the month many crops will be in much better shape than they are late this week, but permanent crop damage has occurred and crop yields will still be lower than what was projected earlier in the season.

Europe, New Zealand and Australia - Weather

EUROPE: Rounds of precipitation will continue to maintain moist conditions throughout the North Sea Region into France, Germany, Switzerland and northeastern Italy as well as southern Scandinavia this week. Moisture will reach into the northwestern Balkan Nations Thursday into early next week and may expand into portions of the southeastern Balkan Nations early next week.

AUSTRALIA: Rounds of scattered precipitation will occur over southeastern Australia including Victoria as well as central and southern New South Wales this workweek. The moisture will limit fieldwork and harvest in a few locations, but many locations the moisture will be brief and erratic enough that some fieldwork should progress around the rain.

☒ Daily moisture totals will vary from 0.20 to 0.80 inch and local totals in excess of 1.00 inch.
