

Weather Report

14 March 2022

South Africa - Weather

Periods of rain will continue for South Africa through the end of next week. The rain will be beneficial for late-season development in the main production areas. Maturation and early season harvesting will otherwise be sluggish. Minor quality declines will be possible in areas that receive the most rain as well. Drier weather will be needed later this month into April to support more favorable maturation and harvest conditions. Light shower activity will begin in portions of South Africa today before a frontal boundary promotes more widespread rain this weekend into Tuesday

- o Periods of light rain will persist later next week
- o Moisture totals by next Friday morning will range from 0.75-3.00" in most locations with locally greater amounts in Eastern Cape, southern Natal, and neighboring areas
- o Drier pockets are also expected in Limpopo and Northern Cape
- Much of South Africa will have opportunities for light rain March 19 – 25

United States of America - Weather

U.S. MIDWEST: Today's forecast is wetter for Mar. 21-23 and after mostly dry conditions Saturday into Wednesday two rounds of precipitation from Thursday through Mar. 23 will cause delays to early-season fieldwork.

- o An area of snow and travel delays will occur from east-central and southeastern Missouri to Kentucky and Ohio today into early Saturday.
- o Most areas will see 1 to 2 inches of snow with greater totals in some eastern areas.

U.S. DELTA AND SOUTHEAST: The Delta and the Southeast will see regular rounds of precipitation through the next two weeks that will keep fieldwork at a slow pace while inducing beneficial increases in soil moisture in the drier areas.

- o Light snow and travel delays will occur from the central and northern Delta through northern Georgia this evening into early Saturday before temperatures in the middle and upper 50s Sunday melt the snow.

South America - Weather

BRAZIL: Much of Brazil and Paraguay will receive rain through Sunday with northern Rio Grande do Sul to Parana, southern and eastern Mato Grosso do Sul, and Sao Paulo seeing totals of 0.75-2.0" and locally more.

- o Most other areas will receive 0.30-1.30" and locally more with areas of mostly dry weather from west-central into southern Rio Grande do Sul as well as from Bahia into central and eastern Minas Gerais and Espirito Santo.

ARGENTINA: Argentina will see a drier weather pattern through the next two weeks allowing for fieldwork to advance well across the country while soil moisture in place should support the needs of most crops.

- o Some west-central and southern areas will need an increase in rain late this month to prevent crops from becoming stressed by a lack of soil moisture.
- o At least some timely showers will occur late next week and the moisture will buy crops more time before stress would increase if rain does not return soon.

Europe, New Zealand and Australia - Weather

EUROPE: Significant rain in Spain, Portugal, and southern France through the next ten days will still be beneficial and provide a notable increase in topsoil moisture which will lead to favorable spring planting and early season crop development. Below average precipitation in the northeastern part of the region is still not a concern as of right now, especially since soil moisture is favorable; however, greater moisture will be needed later in the month as more warming occurs.

AUSTRALIA: Crop conditions in eastern Australia are still rated mostly well, but the need will increase in the first week of the outlook for moisture in unirrigated late-season sorghum and immature dryland cotton production areas. Dryness has not festered into a huge problem, but there is some increasing moisture stress and rain would help to mitigate that issue. Irrigated crops continue to perform well and no change is expected. Early season grain and oilseed maturation and harvest progress also continues to advance well, but there is need for greater rainfall for immature crops. The showers advertised in this coming week will help to provide a little moisture, but net drying is expected in most key crop areas of the east which will leave a need for more.
