

Weather Report

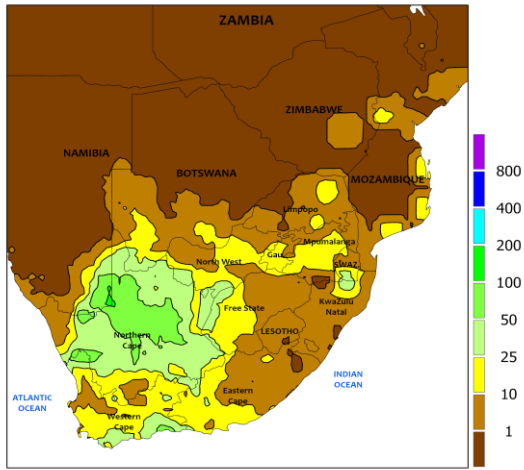

29 June 2022

South Africa - Weather

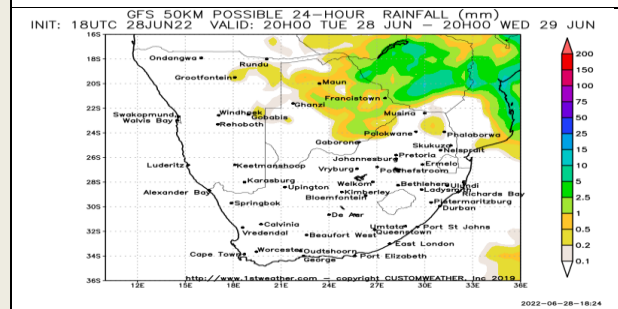

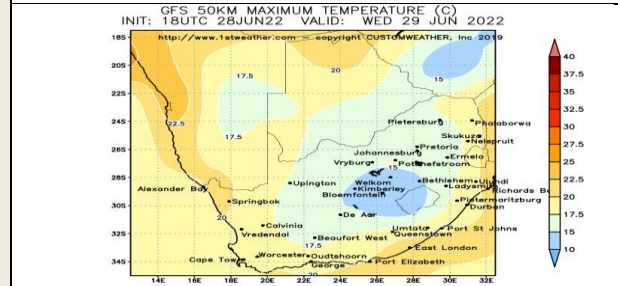

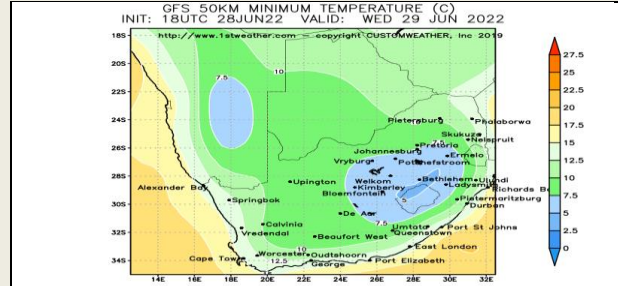

Drier biased conditions will persist for much of South Africa during the coming week. Southwestern Western Cape will still receive rain while that will maintain a good environment for the winter wheat. Other winter wheat production areas in western and central South Africa will continue to see good winter wheat prospects despite the lack of rain.

- o South Africa will generally be drier than normal during the coming week
- o Western fringes of Western Cape will still see periods of rain this weekend
- o Moisture totals by next Tuesday morning will range from 0.25-1.50"
- o and locally greater amounts in the southwest corner of Western Cape
- o Any rain that occurs elsewhere will be lost to evaporation
- South Africa will generally remain drier biased July 6 – 12, though portions of Western Cape and neighboring areas will receive rain

United States of America - Weather

U.S. MIDWEST: Much of the Midwest was cooler than normal and dry Monday with light rain in a few western locations. Crop should remain favorably rated in much of the Midwest during the next ten days to two weeks as mild temperatures through the next week and at least some rain should aid establishment of newly planted crops with shallow root systems while more advanced crops will have adequate subsoil moisture to support crop development.

U.S. DELTA AND SOUTHEAST: Rain fell Monday from just east of south-central Mississippi to northern Georgia to southern Virginia while other areas were mostly dry with warm to hot temperatures south of where rain fell and mild temperatures elsewhere. The Delta and the Southeast will see scattered showers through the next two weeks and although rain will be erratically distributed most days, all areas will see multiple rounds of rain that will slow drying rates and will ease stress to crops.

South America - Weather

BRAZIL: Dry weather will be most common through the next two weeks with occasional rounds of showers and thunderstorms in southern Paraguay, southern Brazil, and eastern Bahia with breaks between rounds of rain adequate to allow fieldwork advance while other areas see little to no rain.

ARGENTINA: Beneficial, but light, rain fell on parts of west-central and interior north-central Cordoba Monday with eastern Santa Fe to southern Corrientes and northeastern Entre Rios also seeing light rain. Dry weather and favorable conditions for fieldwork will occur through much of the next two weeks with a few rounds of mostly light showers on occasion that will favor eastern areas.

Europe, New Zealand and Australia - Weather

EUROPE: Central production areas north of Italy will start to trend drier after Friday. Before this drying trend, more thunderstorms will occur and some could be strong to severe with damaging winds and locally large hail, especially in Germany and Poland. No dryness relief is still expected in much of Italy, Spain, and Portugal. Rain in the Balkan Countries will be erratic and not likely enough to satisfy the needs of crops in much of this part of Europe.

AUSTRALIA: Significant rain in Queensland and portions of New South Wales Thursday into Sunday will lead to some fieldwork delays. Topsoil moisture in Queensland has become short and rain will be beneficial for improving this; however, the rain is likely to be more than preferred, especially in northern production areas of Queensland.
