

Weather Report

02 September 2022

South Africa - Weather

South Africa will remain dry or mostly dry during the coming week. Periods of light rain will still occur in Western Cape and neighboring areas, though resulting rainfall will be lost to evaporation. Winter wheat prospects remain mostly good in western and central South Africa. A good soaking of rain would still be welcome later this month. • South Africa will be drier biased during the coming week

- o Periods of light rain will still occur in Western Cape and neighboring areas in Northern Cape and Eastern Cape Friday into early next week
- o Pockets in southwestern Western Cape will receive 0.25-1.00" of rain by next Thursday morning
- o Other areas will not receive enough rain to counter evaporation
- South Africa will again be drier biased September 9 – 15
- o However, periods of light rain will be possible in western and southern South Africa

United States of America - Weather

U.S. MIDWEST: Much of the Midwest has adequate soil moisture in place to favorably support late crop development during the next two weeks while warm temperatures and infrequent rain will allow crop maturation to occur mostly favorably as well with today's forecast wetter for the eastern Corn Belt Sunday through Wednesday.

Some of the lingering dry areas in the west-central and southwestern Corn Belt likely do not have enough soil moisture to favorably support crops, but rain this late in the season would not likely have much of an impact on yields. Showers Sunday into Wednesday in the eastern Corn Belt or rain in much of the Midwest Sep. 10-12 should not cause serious concerns over crop quality declines or delays to fieldwork.

U.S. DELTA AND SOUTHEAST: Little rain and favorable conditions for fieldwork will occur for a couple more days in the Delta and the Southeast before a wet weather pattern begins Saturday and continues through Sep. 12 and concerns over crop quality declines may increase while some flooding may occur as well. The southern Delta to Georgia, northern Florida, and western and central South Carolina will be wettest Saturday into Monday.

South America - Weather

BRAZIL: High temperatures today and Friday will be in the upper 70s to the middle 90s with some upper 90s and lower 100s in the west and some upper 60s to the middle 70s from the south to eastern Bahia. Highs Saturday through next Thursday in the south will be in the 60s through the lower 80s with some middle and upper 50s Saturday and some 50s Thursday. Highs in the north will be in the 80s and 90s with some 70s in the east and some lower 100s in western and central areas.

ARGENTINA: Outside of rain today from central and interior northern Santa Fe to central and northern Entre Rios and Corrientes, a restricted rainfall pattern will be in place through the next two weeks leaving many areas, especially in the west, in need of rain to improve soil moisture for the summer crop planting season. Rain today will be greatest from central and interior northern Santa Fe to central and northern Entre Rios and Corrientes where totals will be 0.40-1.50" and locally more. Some northern areas will see lighter rain while lighter rain surrounds the region described and extends in to parts of southeastern Santiago del Estero and northeastern Cordoba.

Europe, New Zealand and Australia - Weather

EUROPE: Coverage of meaningful rainfall will increase some in the first week of the outlook and will then likely increase more in the second week. The rain will be beneficial in helping to increase topsoil moisture; however, it will be too late for some crops. An unusually warm temperature bias will continue in the first week followed by cooling in the second week and the combination of cooler temperatures and wetter conditions will lead to a generally less harsh environment. A negative impact of the greater rainfall will be some fieldwork delays that occur.

AUSTRALIA: Favorable conditions will continue in most of the region the next two weeks. In the first week of the outlook, more timely rainfall is expected in Queensland which will raise topsoil moisture. Southeastern production areas in and near Victoria will receive a needed break from the rain. Western Australia will receive some timely rain starting Friday.
