

Weather Report

04 November 2022

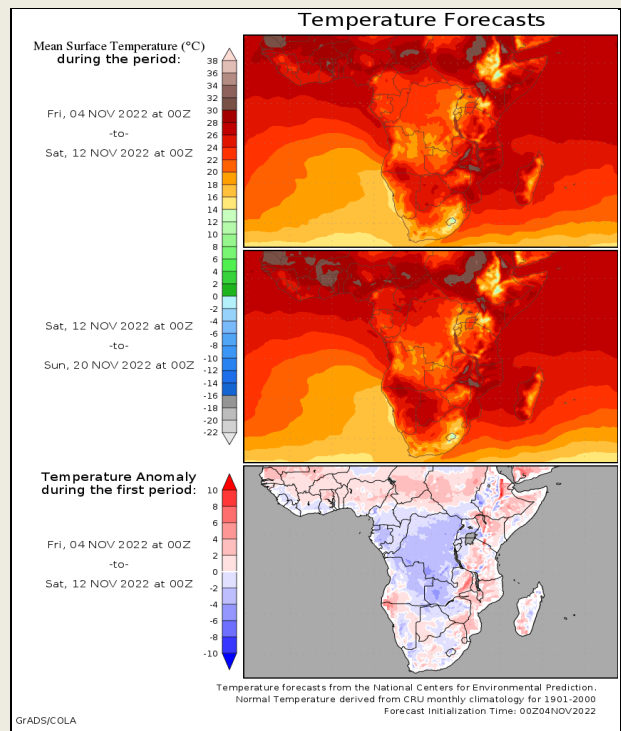

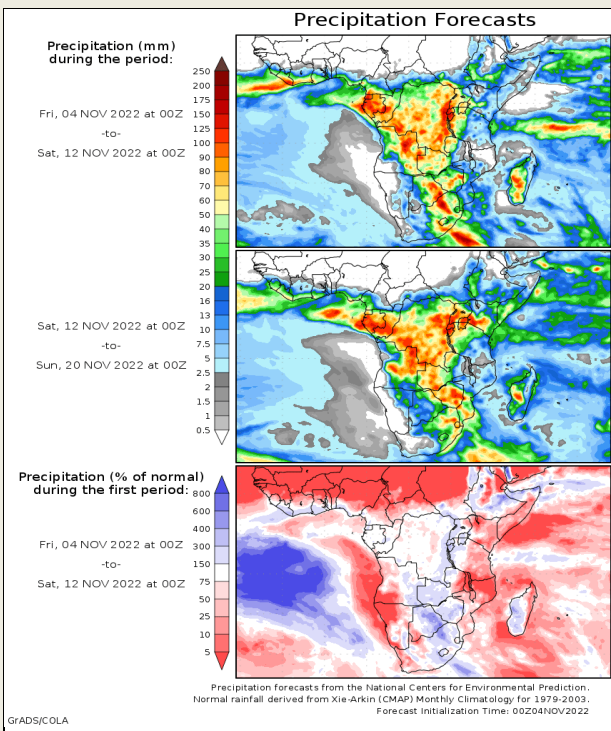

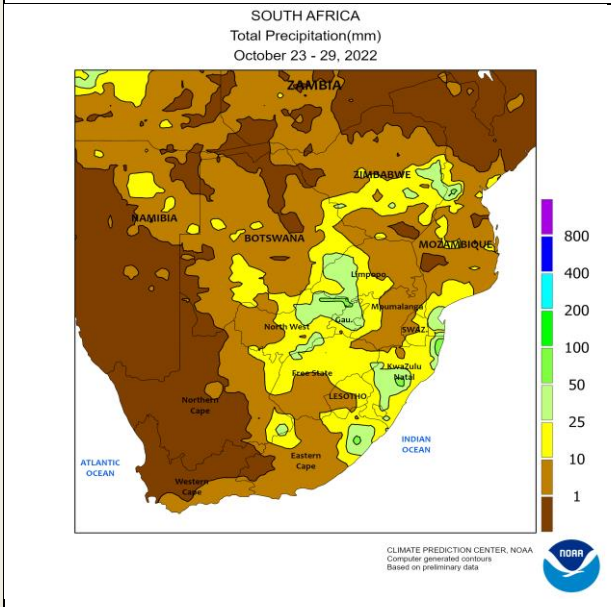

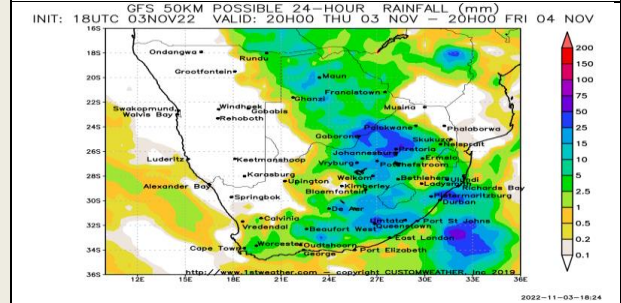

South Africa - Weather

SOUTH AFRICA: Frequent rainfall will continue for eastern and central South Africa during the coming week. Rainfall will be enough to further bolster soil moisture in most locations. Planting of the summer crops may be sluggish during the wettest periods. Establishment and development conditions will otherwise be favorable. Winter wheat harvesting may otherwise advance slowly during the periods of more significant rain in Free State.

Many areas in western South Africa will also see periods of rain during the coming week. Harvesting of winter wheat may be sluggish in Western Cape and Northern Cape, though most producers will have opportunities to harvest between rain events. Eastern and central South Africa will see several waves of rain during the coming week

o Some of the most widespread and significant rain will evolve through Saturday and again early next week o Moisture totals by next Thursday morning will range from 1.50-4.00" with locally greater amounts

- Western South Africa will see variable rainfall during the coming week
- Western Cape and portions of southern and eastern Northern Cape will see a mix of rain and sunshine

United States of America - Weather

U.S. MIDWEST: Good harvest progress is expected overall during the next two weeks around one round of widespread precipitation Thursday evening into Saturday and a couple light precipitation events that will induce improvements in conditions for establishment of winter wheat in many areas while some relief from drought occurs in the western Corn Belt. The soil is dry enough that even where heavy rain falls in the western Corn Belt delays to fieldwork should not become extended. Temperatures will be much warmer than normal to unseasonably warm through much of the next week and highs will generally be in the 50s through the lower 70s with some cooler temperatures in the northwest and some warmer temperatures in the south.

U.S. DELTA AND SOUTHEAST: The Delta and the Southeast will see a mostly restricted rainfall pattern through the next two week and harvesting should advance well overall around rain Saturday into Sunday from the Delta to northeastern Mississippi.

South America - Weather

BRAZIL: Rain through the next week will be focused on northeastern Brazil where beneficial increases in soil moisture result while western into central and southern Brazil see little to no rain and rapid planting progress as well as good winter wheat harvest progress. Concerns over dryness in western, central, and southern Brazil and Paraguay will increase during the next week, but as long as a timely round of rain advertised for Nov. 10-12 and follow-up showers Nov. 13-16 occur as advertised most areas should be left with enough soil moisture to favorably support crop development.

ARGENTINA: Planting should advance well during the next two weeks around one round of rain advertised for Nov. 9-12 will be important for many western, central, and northern areas. The period of wetter weather Nov. 9-12 is not likely to result in enough rain to soak the soil in many areas and rain will be needed again soon in many locations.

Europe, New Zealand and Australia - Weather

EUROPE: A restricted precipitation pattern will continue today and Tuesday.

o However, some heavy rain will occur with isolated to scattered rain showers and thunderstorms over southeastern Spain into central Italy and into Bosnia, Montenegro, Albania and southern Serbia and Macedonia. Moisture totals will vary from 0.75 to 3.00 inches and locally more.

AUSTRALIA: Net drying is expected across most of the region in the next seven days which will be beneficial for improving crop and field working conditions. Some rain will occur; however, it will be a favorable amount with not enough to delay fieldwork. Temperatures will also be trending warmer.
