Market Report : 30 August 2023

## **United States of America - Weather**

U.S. MIDWEST : Another two weeks of mostly restricted rain along with warm to hot temperatures late this week into early next week will cause further declines in soil moisture and additional reductions in oybean yields in the drier areas while these conditions will speed up corn maturation and drying. o Temperatures will be mild into Thursday with parts of the Great Lakes region seeing highs in the upper 60s and lower 70s Wednesday.

U.S. DELTA : Hurricane Idalia will make landfall on the northwestern Florida Peninsula Wednesday as a strong hurricane before moving to south-central into southeastern Georgia to the central South Carolina coast before turning to the east and into the Atlantic Ocean Thursday. o The storm will bring strong enough winds to damage property and infrastructure and cause power outages in the norther Florida Peninsula and in portions of south-central and southeastern Georgia while flooding occurs from this region through a large part of South Carolina and eastern North Carolina.

# Europe, New Zealand and Australia - Weather

EUROPE : Rainfall in the next seven days will still be enough to cause some fieldwork delays, especially in central production areas. Some needed rain is expected in Italy and the Balkan Countries though. Localized flooding may occur near the Alps. The rain will be a benefit to late season, immature crops, but drier weather would benefit harvesting progress. Hot temperatures in southern France, northwestern Italy and Spain continue to stress crops and cooling expected soon should bring at least some relief, although it is doubtful that much rain of significance will fall from France into Spain until late this weekend into next week. AUSTRALIA : Some eratic shower activity and a few thunderstorms in the next seven days will be beneficial; though, much more rain will be needed in Queensland and northern New South Wales. Conditions for fieldwork will continue to be favorable. Southern crops remain in much better condition compared to crops in the north.
