BDLive - Sydney — Asian shares got off to a stumbling start on Monday as China's central bank wrong-footed markets by skipping on a rate cut, even as data due this week is expected to show the economic recovery there remains fragile.

China reports economic growth data for the fourth quarter and a slew of monthly figures on Wednesday. Investors have become used to being underwhelmed by activity as Beijing drip feeds its stimulus. Chinese blue chips eased 0.5% in response, reaching their lowest since early 2019. A holiday in the US also made for thin trading, but at least there was progress on averting an imminent government shutdown as congressional leaders agreed on another stopgap spending bill. MSCI's broadest index of Asia-Pacific shares outside Japan dipped 0.2% after losing 0.8% last week. Japan's Nikkei bucked the chary mood and rose 0.6% to a fresh 34-year peak, having already enjoyed stellar gains of 6.6% last week. S&P 500 futures and Nasdaq futures were both down about 0.1% in early trade. Euro Stoxx 50 futures added 0.1% and FTSE futures firmed a fraction.

BDLive - Bengaluru — Gold prices edged up on Monday, holding above the \$2,050 level on safe-haven appeal from elevated tensions in the Middle East and on renewed bets for an early rate cut by the US Federal Reserve.

Spot gold was up 0.2% at \$2,053.69 per ounce by 4.35am GMT (6.35am) after marking its biggest daily gain since December 12 on Friday. US gold futures rose 0.3% to \$2,057.70. The war between Israel and Hamas reached its 100th day as Israel continued its fierce offensive, while Houthi militia threatening a response to US air strikes on Yemen kept risks of escalations in the Middle East elevated. "Gold is just trading as a proxy for front end yields, which itself is a proxy for amped up expectations of rate cuts in the US," with the market now looking past the higher-than-expected CPI figures, said Kyle Rodda, a financial market analyst at Capital.com. Data on Friday showed US producer prices unexpectedly fell in December, sending 10-year Treasury yields sliding in response.

FarmProgress - Corn prices tumbled noticeably lower after unhelpful data from USDA's WASDE report triggered an ample round of technical selling on Friday. March futures dropped 9 cents to \$4.4875, with May futures down 9.25 cents to \$4.6050.

Corn basis bids were steady to mixed across the central U.S. after trending as much as 11 cents lower at a Nebraska processor and as much as 2 cents higher at an Illinois river terminal on Friday. USDA was bullish on corn production versus previous analyst estimates in today's report. The agency showed production at 15.3 billion bushels, based on a record average yield of 177.3 bpa. That was above trade guesses of 15.226 billion bushels, with average yields noticeably lower at 174.90 bpa. USDA increased its total corn usage by 75 million bushels to 14.6 billion. That is based on a 50-million-bushel bump in ethanol use and a 25-million-bushel bump in feed and residual use. Supplies rose more than usage, however, so 2023/24 corn ending stocks moved 31 million bushels higher. The season-average farm price eased 5 cents lower to \$4.80 per bushel. And according to the latest exclusive Farm Futures grower survey, which was conducted between mid-December and early January, more than 850 respondents indicated that 2023 U.S. national corn yields could rise around 2% higher year-over-year to 176.1 bushels per acre, with a record-breaking production of 15.339 billion bushels. Click here to dig through more of the data points revealed in this survey. China's agriculture ministry slightly raised its 2023/24 corn production estimates to 11.371 billion bushels, due largely to an uptick in planted acres. However, the ministry also fractionally lowered its estimates for China's 2023/24 soybean production to 765.7 million bushels but did not offer an explanation for this move.

Preliminary volume estimates were for 560,201 contracts, which more than doubled Thursday's final count of 266,977.

FarmProgress - Soybean prices followed corn and most wheat prices lower after USDA's supply and demand data spurred another round of technical selling on Friday. January futures stumbled 25.5 cents lower to \$12.0575, while March futures dropped 10.25 cents to \$12.2625.

The rest of the soy complex was also in the red today. January soybean meal futures eroded 2.75% lower, while January soybean oil futures endured more modest losses. Soybean basis bids were mostly steady across the central U.S. on Friday but did tilt 5 cents lower at an Ohio elevator today. USDA modestly increased its estimates for 2023 soybean production by 35 million bushels to 4.2 billion, with average yields estimated at 50.6 bpa. As with corn, that was above the average trade guess of 4.134 billion bushels and 49.9 bpa, respectively. USDA noted particular increases in Illinois, Missouri and North Dakota in today's report. Soybean stocks increased by 35 million bushels to 280 million. The season-average farm price slid 15 cents lower to \$12.75. Soybean prices also shifted 10 dollars lower from a month ago, to \$380 per short ton, and soybean prices faded 3 cents lower to 54 cents per pound. Ahead of the next monthly report from the National Oilseed Processors Association (NOPA), out next Tuesday, analysts expect the group to show a record-breaking 194.120 million bushel crush in December. That would be 8.8% higher year-over-year and the largest monthly crush on record, if realized. Soybean supplies are expected to rise to 1.291 billion pounds through the end of December. In China, soybean imports trended higher for the first time in three years after climbing 11.4% higher in 2023 to 3.653 billion bushels, even after December totals of 360.8 million bushels failed to match analyst expectations. Brazil and the United States accounted for the bulk of these purchases.

FarmProgress - Wheat prices were modestly mixed but mostly lower following some uneven technical maneuvering, with spillover weakness from corn and soybeans pulling some contracts into the red. March Chicago SRW futures dropped 6.75 cents to \$5.97, March Kansas City HRW futures added 2 cents to \$6.18, and March MGEX spring wheat futures eased a penny lower to \$6.99.

USDA lowered wheat ending stocks by 11 million bushels to 648 million due to decreasing supplies more than offsetting lower usage. Seed use fell 1 million bushels to 64 million. The season-average farm price fell 10 cents per bushel to \$7.20.

Winter wheat seedings are expected to decrease from 36.999 million acres in 2023 to 34.400 million acres in 2024/25. All major types (hard red winter, soft red winter and white winter) are expected to face acreage declines.

Preliminary volume estimates were for 135,163 CBOT contracts, trending well above Thursday's final count of 60,699.
