United States of America - Weather

U.S. MIDWEST : Favorable soil moisture in place today and mostly mild temperatures through Friday will keep crop conditions mostly favorable during the next two weeks across the Midwest as the region enters a pattern of less frequent rain with much of the western and central Corn Belt likely to dry down significantly during the period. o The remnants of Hurricane Beryl will bring moderate to heavy rain to areas from east-central and southeastern Missouri to southeastern Michigan and northwestern Ohio tonight into Thursday with rain expected to the south of the region as well. @ The moisture will be beneficial and will fall on most of the driest areas in the Midwest.

U.S. DELTA : The Delta and the Southeast will see two to three rounds of rain during the next two weeks that will improve soil moisture in some areas while slowing drying rates in others with a large part of the region likely to dry down overall and see stressful conditions for crops at times due to warm to hot temperatures and low soil moisture o The northern Delta will benefit from moderate to heavy rain from the remnants of Hurricane Beryl today into Tuesday before the Carolinas and southern Virginia benefit from daily showers Wednesday through Friday.

South America - Weather

BRAZIL: Central and southern Mato Grosso do Sul and nearby Paraguay to eastern Sao Paulo and Parana to Santa Catarina and northeastern Rio Grande do Sul will see regular rounds of rain through Friday with additional rain in parts of the region through next Monday that will slow fieldwork before drier weather July 16-22 allows fieldwork to increase. o The rain will be beneficial for winter crops in central and southern Mato Grosso do Sul and central Paraguay where soil moisture is short.

ARGENTINA : Argentina will see dry weather and favorable conditions for fieldwork most often through much the next two weeks with a light showers that should not bring enough rain to have a significant impact on crops or soil conditions. o Winter wheat planting in west-central and northwestern Argentina would benefit from greater rain than what is expected.

Europe, New Zealand and Australia - Weather

EUROPE : Rainfall in the next seven days will be more than preferred for some areas, leading to some fieldwork delays and localized flooding. This will be mainly an issue for central parts of the region, especially near the Alps and in France where topsoil moisture is already excessive. The rain will be beneficial and needed in the Balkan Countries.

AUSTRALIA : Conditions in the next seven days will be mostly favorable for the region with a mix of rain and sunshine. Recent rainfall has been beneficial for the drier areas of Australia and additional rain this week will further benefit crop development. Some pockets will still be in need of more rain though.
