

Weather Report

13 August 2024

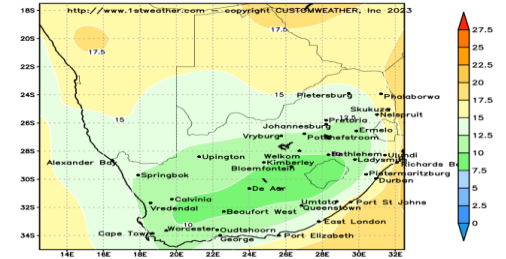

South Africa - Weather

SOUTH AFRICA : South Africa will generally receive little or no rain this week. Western Cape will still have a few opportunities for precipitation that will maintain a good outlook for the winter wheat. Free State would benefit from a boost in rain late this month into September to support good wheat prospects. South Africa will generally trend drier than normal this week. A frontal boundary will still promote rain in Western Cape and neighboring areas Tuesday. Coastal Eastern Cape and Natal will have a few opportunities for light rain as well. Portions of southwestern Western Cape will receive 0.25-1.00" of rain with local amounts up to 2.00" by next Monday morning. Other locations in South Africa will either be dry or not receive enough rain to counter evaporation. South Africa will be drier biased August 20 - 26. Light rain will still be possible in southern and eastern South Africa.

United States of America - Weather

U.S. MIDWEST : A timely period of wetter weather today through Friday will restore some of the soil moisture and improve conditions for crop development in the drier areas across the Midwest while keeping soil moisture favorable and yield potentials high elsewhere. o Rain will be most important from eastern Nebraska into western Iowa where precipitation is expected Tuesday into Wednesday while eastern Kansas into Missouri benefitted from rain Sunday into this morning and will benefit from additional rain during the next few days.

U.S. DELTA : Rain will be infrequent and often light during the next two weeks in the Delta and the Southeast and flood conditions will steadily improve in areas impacted by Hurricane Debby while crop stress increases and expands in the drier areas from the Delta into western Alabama. o Some rain is expected and the rain will be important in areas where crop stress has begun to increase, but is not yet serious, with the rain likely to buy crops more time before greater stress evolves while the rain may not be great enough to significantly improve crop conditions in the driest areas.

Europe, New Zealand and Australia - Weather

EUROPE : Conditions in the next seven days will still be warmer and drier than preferred in southern production areas leading to some more crop and livestock stress, mainly in fields that did not receive much rain this past weekend. Romania should receive some more beneficial rainfall though. Also, portions of the Balkan Countries will be doing better for a while due to recent rainfall; however, evaporation rates will be high. Northern production areas of Europe will still be mostly favorable.

AUSTRALIA : Conditions in the next seven days will be mostly favorable. Some needed rain will occur in Queensland and South Australia; though, more will be needed in South Australia for use in spring. The rain will likely lead to minor fieldwork delays. Rain will be particularly significant along and near the coast of Queensland which will mainly impact some sugarcane areas.
